

ABSOLUTE STRATEGIES FUND (the "Fund")

Supplement dated October 4, 2018 to the Prospectus dated August 1, 2018

1. *The paragraph entitled "Long/Short Hedged Equity Strategies" in the section entitled "Principal Investments Strategies" on page 3, is hereby deleted in its entirety and replaced with the following:*

Long/Short Hedged Equity Strategies invest in securities believed to be undervalued or offer high growth opportunities while also attempting to minimize overall market risk or take advantage of an anticipated decline in the price of an overvalued company or index by using short sales, futures or options. Strategies may use futures or options to hedge risk, increase or reduce the Fund's investment exposure or obtain leverage. Hedged Equity refers to a strategy that generally contains a number of long investments but also certain other securities (cash, shorts, derivatives) designed to mitigate a certain risk(s) embedded in those longs.

2. *The paragraphs entitled "Agricultural Industry Investment Risk" in the sections entitled "Principal Investment Risks" on page 5 and "Additional Information Regarding Principal Investment Risks" on page 19, are both hereby deleted in their entirety.*
3. *The paragraph entitled "Subadvisers" in the sub-section entitled "Investment Adviser" in the section entitled "Management" on page 12 of the Prospectus is hereby deleted in its entirety and replaced with the following:*

Subadvisers. St. James Investment Company, LLC and Tortoise Capital Advisors, L.L.C. are the Subadvisers to the Fund.

4. *The paragraph entitled "Long/Short Hedged Equity Strategies" in the section entitled "Additional Information Regarding Principal Investment Strategies" on page 16, is hereby deleted in its entirety and replaced with the following:*

Long/Short Hedged Equity Strategies invest in securities believed to be undervalued or offer high growth opportunities while also attempting to minimize overall market risk or take advantage of an anticipated decline in the price of an overvalued company or index by using short sales, futures or options. Strategies may use futures or options to hedge risk, increase or reduce the Fund's investment exposure or obtain leverage. Long and short positions may not be invested in equal dollars and, as such, may not seek to neutralize general market risks. At times, the Fund may have a long bias or a net short bias in equity sensitive investments.

5. *The table and paragraphs that follow the table in the sub-section entitled "The Adviser and Subadvisers" in the section entitled "Management" on page 34 of the Prospectus are hereby deleted in their entirety and replaced with the following:*

Subadviser	Investment Strategy
St. James Investment Company, LLC 3838 Oak Lawn Avenue, Suite 1414 Dallas, TX 75219	Concentrated Equity
Tortoise Capital Advisors, L.L.C. 11550 Ash Street, Suite 300 Leawood, KS 66211	Select Energy Opportunity

St. James Investment Company, LLC was founded in 1999 and manages assets for institutional clients, high-net worth individuals and mutual funds.

Tortoise Capital Advisors, L.L.C. was founded in 2002 and provides investment advisory services for separately managed accounts, private funds and other pooled investment vehicles.

ABSOLUTE STRATEGIES FUND

Summary Section

Investment Objective

Absolute Strategies Fund (the “Fund”) seeks to achieve long-term capital appreciation with an emphasis on absolute (positive) returns and low sensitivity to traditional financial market indices such as the Standard & Poors 500® Index (“S&P 500® Index”).

Fees and Expenses

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)	Institutional Shares
Management Fees	1.60%
Distribution and/or Service (12b-1) Fees	None
Other Expenses	1.36%
Other Expenses	0.54%
Dividend and Interest Expenses on Short Sales ⁽¹⁾	0.82%
Acquired Fund Fees and Expenses	0.27%
Total Annual Fund Operating Expenses⁽²⁾	3.23%
Fee Waiver and/or Expense Reimbursement ⁽³⁾	(0.15)%
Total Annual Fund Operating Expenses After Fee Waiver and/or Expense Reimbursement	3.08%

⁽¹⁾ Dividend and interest expenses on short sales occur when the Fund sells an equity or debt security short to gain the inverse exposure necessary to meet its investment objective.

⁽²⁾ Total Annual Fund Operating Expenses do not correlate to the ratio of expenses to average net assets given in the financial highlights due to a reduction in the expense cap for the Fund and because they do not include Acquired Fund Fees and Expenses (“AFFE”).

⁽³⁾ Absolute Investment Advisers LLC (“Absolute”) has contractually agreed to waive its fee and/or reimburse Fund expenses to limit Total Annual Fund Operating Expenses (excluding all taxes, interest, portfolio transaction expenses, dividend and interest expenses on short sales, acquired fund fees and expenses, proxy expenses and extraordinary expenses) to 1.99% through August 1, 2019 (the “Expense Cap”). Absolute may be reimbursed by the Fund for fees waived and expenses reimbursed by Absolute pursuant to the Expense Cap if such payment is made within three years of the fee waiver or expense reimbursement and does not cause the Total Annual Fund Operating Expenses After Fee Waiver and/or Expense Reimbursement of the Fund to exceed the lesser of (i) the then-current expense cap, and (ii) the expense cap in place at the time the fees/expenses were waived or reimbursed. The Expense Cap may only be raised or eliminated with the consent of the Board of Trustees.

Example. This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, whether you do or do not redeem your shares at the end of each period described below, your costs would be:

1 Year	3 Years	5 Years	10 Years
\$311	\$981	\$1,675	\$3,521

ABSOLUTE STRATEGIES FUND

Portfolio Turnover. The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Fund shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the Example, affect the Fund’s performance. During the most recent fiscal year, the Fund’s portfolio turnover rate was 86% of the average value of its portfolio.

Principal Investment Strategies

Absolute Investment Advisers LLC (“Absolute”), the Fund’s investment adviser, believes that there are important benefits that come from investing through skilled asset managers whose strategies, when combined, seek to provide attractive long-term risk-adjusted returns, with lower volatility and low sensitivity to traditional market measures. To this end, Absolute selects for the Fund asset managers (“Subadvisers”) whose investment strategies seek to provide a different source of risk and return relative to traditional market indices over a complete market cycle. An investment strategy employing multiple subadvisers is commonly referred to as a “multi-manager” strategy.

The Subadvisers utilize strategies and investment techniques that, in the aggregate, seek to produce long-term risk-adjusted returns over a complete market cycle while managing risk exposure. Absolute considers long-term risk-adjusted investment returns to be those that do not incur a permanent loss of capital over a full market cycle. Although the Fund is not a hedge fund, such strategies are more commonly associated with hedge funds. These strategies may attempt to exploit disparities or inefficiencies in markets, geographical areas, or companies; take advantage of security mispricings or anticipated price movements; and/or benefit from cyclical themes and relationships or special situations and events (such as spin-offs or reorganizations). Such strategies may have low sensitivity to traditional markets because they seek investment opportunities and risks that do not correlate with traditional markets.

Absolute has responsibility for allocating Fund assets across strategies and investment styles that Absolute believes are complementary and, when combined, will produce long-term risk-adjusted returns. To this end, Absolute will be responsible for selecting the Fund’s Subadvisers and determining the portion of the Fund’s assets to be allocated to each Subadviser. The Fund may obtain exposure to a Subadviser’s strategy by investing in a registered investment company whose portfolio is managed by the Subadviser pursuant to the strategy. Absolute reviews a range of factors (e.g., investment process) when evaluating each Subadviser and its appropriate asset allocation. Absolute may direct a Subadviser to reduce or limit its investment in certain assets or asset classes in order to achieve the desired composition of the Fund’s portfolio. Absolute retains the discretion to invest the Fund’s assets in securities and other instruments directly. These investments may be short-term and/or opportunistic in nature and are typically expressed through a combination of long and short index-related securities on various asset classes. Absolute also has the discretion to remove Subadvisers or, subject to board approval, add Subadvisers at any time. The Subadvisers use a combination of the following investment strategies:

Opportunistic and Long-Biased Equity Strategies seek to capitalize on undervalued equity securities (common stock, preferred stock, convertible securities, warrants, rights and sponsored or unsponsored American Depositary Receipts (“ADRs”)) or on positive market trends and, therefore, typically invests in a variety of securities markets, industries, company sizes, or geographical areas. Strategies may be managed for absolute return and typically utilize short sales, options and futures and forward contracts to implement selective hedging and manage risk exposure. Strategies may also focus on special situations or events, including distressed equities.

Long/Short Equity or Market Neutral Strategies attempt to neutralize exposure to general domestic market risk by primarily investing in common stocks that are undervalued and short selling stocks that are considered to be overvalued. Strategies may attempt to realize a valuation discrepancy in the relationship between multiple securities

ABSOLUTE STRATEGIES FUND

(relative value or value arbitrage), or may utilize quantitative factors to measure investment attractiveness among securities. Long/Short Equity includes the broad ability to invest in stocks both long and short. Long exposure to a security means the holder of the position owns the security and will profit if the price of the security increases. A short position generally involves the sale of a security that the Fund has borrowed (but does not own) with the expectation that the price of the security will decrease in value, enabling the Fund to repurchase the security later at the lower price. Longs and shorts may be directly related to one another or independent from each other. Equity Market Neutral is a strategy that commits to maintaining a certain balance of long and shorts. This could mean equal parts long and short to keep the net exposure at or near zero, or it could mean a slightly variable amount long and shorts to keep the strategy beta at zero.

Convertible Arbitrage Strategies seek to take advantage of the pricing inefficiencies of the embedded option in a convertible bond. Convertible arbitrage involves purchasing a portfolio of convertible securities, generally convertible bonds, and hedging a portion of the equity risk by selling short the underlying common stock. Subadvisers typically utilize futures, options and credit default swaps in order to seek to manage interest rate exposures and employ leverage to increase returns. Leverage means obtaining investment exposure in excess of the Fund's net assets, which creates the potential for magnified gains or losses. See "Leverage Risk," below, for more information about the risks of leverage.

Long/Short Hedged Equity Strategies invest in securities believed to be undervalued or offer high growth opportunities while also attempting to minimize overall market risk or take advantage of an anticipated decline in the price of an overvalued company or index by using short sales, futures or options. Strategies may use futures or options to hedge risk, increase or reduce the Fund's investment exposure or obtain leverage. These strategies may be specialized in technology, agriculture, and/or financial services, among others. Hedged Equity refers to a strategy that generally contains a number of long investments but also certain other securities (cash, shorts, derivatives) designed to mitigate a certain risk(s) embedded in those longs. Investments in the agricultural industry are typically concentrated equity long-short strategies focused on an entire range of agricultural related businesses.

Fixed Income, Long/Short Credit and Distressed Debt Strategies invest primarily in debt securities of domestic and foreign governments, agencies, and companies of all maturities and qualities, including high yield "junk bonds," bank loans and other defaulted debt securities, convertible bonds, preferred stock, Treasury Inflation Protected Securities ("TIPS"), and emerging market debt or exchange traded funds ("ETFs") that invest in such securities. The Fund may invest in mortgage-backed securities, collateralized mortgage obligations, asset-backed securities and other mortgage related securities ("Mortgage Related Securities"). Certain Mortgage Related Securities in which the Fund invests may be rated below investment grade (*i.e.*, junk bonds) or unrated, under performing securities. Indebtedness of borrowers whose creditworthiness is poor involves substantially greater risks and may be highly speculative.

The Fund invests in both short-term and long-term debt, and is not limited as to the maturities or quality of the corporate debt securities in which it invests. In executing certain strategies, the Fund may short bonds of any credit quality or maturity. Strategies may also utilize credit default swaps to create short positions when a Subadviser anticipates a decline in the price of an overvalued security. The Fund may also purchase credit default swaps to enhance total return and lower volatility and may utilize treasury futures to manage interest rate risk.

Strategies typically involve leverage and hedging through the use of ETFs, futures, credit default swaps, options on swaps, equities (and related equity options), total return swaps, short sales, or committed term reverse repurchase facilities, among other instrument types that the Subadviser believes may enhance total return. In connection with these strategies, the Fund may act as a buyer or seller of credit default swaps.

ABSOLUTE STRATEGIES FUND

Other Strategies Pursuant to any of the above-described strategies, the Fund may trade frequently and may invest in a wide range of instruments, markets and asset classes in domestic and foreign markets. Investments generally include equity securities, fixed income securities and derivatives.

- The Fund may invest in equity securities of issuers of any market capitalization in the U.S. or abroad, including convertible, private placement/restricted, initial public offering (“IPOs”) and emerging market securities, with certain exposures to non-U.S. issuers obtained through investments in ADRs. The Fund may invest in pooled investment vehicles, including ETFs and other registered investment companies sponsored by Absolute and managed by Subadvisers pursuant to the strategies described above.
- The Fund may invest in fixed income securities of any credit quality and maturity, including those with fixed or variable terms and those of defaulted/distressed issuers and bank loans. These securities can be rated below investment grade (*i.e.*, “junk bonds”) and thus rated below Baa3 by Moody’s, BBB- by S&P or BBB- by Fitch Ratings Ltd. or unrated and securities in default.
- The Fund may invest in derivatives, which are financial instruments that have a value that depends upon, or is derived from, a reference asset, such as one or more underlying securities, pools of securities, options, futures, indexes or currencies. The most common types of derivatives in which the Fund may invest are forwards, options, futures and swaps contracts. The Fund’s forward contracts include forward currency contracts. The Fund’s swap agreements may include equity, interest rate, index, credit default and currency rate swap agreements. The Fund’s futures contracts may include futures on securities, commodities, and securities indices. The Fund’s options contracts may include options on securities, securities indices, commodities and futures. The Fund may purchase or write options. The Fund may invest in derivatives to hedge or reduce its exposure to a portfolio asset or risk, to obtain leverage for speculative purposes, to manage cash and/or as a substitute for taking a position in the reference asset or to gain exposure to certain asset classes, in which case the derivatives may have economic characteristics similar to those of the reference asset and the Fund’s investment in the derivatives may be applied toward meeting a requirement to invest a certain percentage of its net assets in instruments with such characteristics. Leverage generally involves the use of debt by the Fund to finance the purchase of investments and results in the Fund controlling substantially more assets than it has equity in an effort to increase returns. The Fund may also obtain leverage by investing an amount equivalent to short sale proceeds.

Principal Investment Risks

The Fund’s net asset value (“NAV”) and investment return will fluctuate based upon changes in the value of its portfolio securities. You could lose money on your investment in the Fund, and the Fund could underperform other investments. There is no guarantee that the Fund will meet its investment objective. An investment in the Fund is not a deposit of a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency.

It is important that you closely review and understand the risks of investing in the Fund prior to making an investment in the Fund.

ADR Risk. The Fund may invest in ADRs. ADR risks include, but are not limited to, fluctuations in foreign currencies and foreign investment risks, such as political and financial instability, less liquidity, lack of uniform accounting, auditing and financial reporting standards and increased price volatility. In addition, ADRs may not track the price of the underlying foreign securities, and their value may change materially at times when U.S. markets are not open for trading. Un-sponsored ADRs may involve additional risks, and their prices may be more volatile than the prices of sponsored ADRs.

ABSOLUTE STRATEGIES FUND

Agricultural Industry Investment Risk. Stocks of companies in the agricultural industry will be susceptible to market and other conditions that affect the agriculture industry and, therefore, the market value of these companies will often be based more on the condition of, and consumers' confidence in, the economy as a whole, rather than on the value of underlying assets held by companies in the agriculture industry.

Cash and Cash Equivalents Holdings Risk. To the extent the Fund holds cash and cash equivalents positions, even strategically, the Fund risks achieving lower returns and potential lost opportunities to participate in market appreciation, which could negatively impact the Fund's performance and ability to achieve its investment objective. This is particularly true when the market for other investments in which the Fund may invest is rapidly rising.

Commodities Risk. Exposure to the commodities markets may subject the Fund to greater volatility than investments in traditional securities. Commodities-related instruments are subject to substantial price fluctuations over short periods of time and may be affected by unpredictable economic, political and environmental events. Factors that may significantly affect the prices of commodities include, but are not limited to: global supply and demand; domestic and international interest rates and investors' expectations of interest rates; inflation rates and investors' expectations of inflation rates; the investment and trading activities of commodity futures contracts; political, economic, or financial events, both globally and regionally.

Convertible Securities and Arbitrage Risk. Convertible securities entail interest rate and credit risks. While fixed-income securities generally have a priority claim on a corporation's assets over that of common stock, convertible securities held by the Fund that are rated below investment grade (*i.e.*, "junk bonds") are subject to special risks, including the risk of default in interest or principal payments, which could result in a loss of income to the Fund or a decline in the market value of the securities. Arbitrage strategies involve the risk that underlying relationships between securities in which investment positions are taken may change in an adverse or unanticipated manner.

Contingent Convertible Securities Risk. In addition to the general risks associated with fixed-income securities and convertible securities, the risks of investing in contingent convertible securities ("CoCos") include the risk that a CoCo may be written down, written off or converted into an equity security when the issuer's capital ratio falls below a specified trigger level, or in a regulator's discretion depending on the regulator's judgment about the issuer's solvency prospects. Due to these features, CoCos may have substantially greater risk than other securities in times of financial stress. If the trigger level is breached, the issuer's decision to write down, write off or convert a CoCo may be outside its control, and the fund may suffer a complete loss on an investment in CoCos with no chance of recovery even if the issuer remains in existence.

Counterparty Risk. The Fund may enter into financial instruments or transactions with a counterparty. A counterparty may become bankrupt or otherwise fail to perform its obligations due to financial difficulties, jeopardizing the value of the Fund's investment.

Derivatives Risk. Derivatives, such as options, futures, forwards and swaps, can be volatile, and a small investment in a derivative can have a large impact on the performance of the Fund as derivatives can result in losses in excess of the amount invested. Other risks of investments in derivatives include risks of default by the other party to the derivative transactions; risks that the transactions may result in losses that partially or completely offset gains in portfolio positions; and risks that the derivative transaction may not be liquid. The Fund's use of derivatives may also expose the Fund to greater or different risks, including the following:

Correlation Risk is the risk of imperfect correlation between the value of these instruments and the underlying assets.

ABSOLUTE STRATEGIES FUND

Credit Derivative Risk is the risk that a credit derivative position, such as a credit default swap, may correlate imperfectly with the price of the asset or liability being hedged. The Fund's risk of loss in a credit derivative transaction varies with the form of the transaction and may be significant.

Hedging Risk is the risk that derivative instruments used to hedge against an opposite position may offset losses, but they also may offset gains. Hedges may not be perfect and typically involve expenses.

Segregation Risk is the risk associated with any requirements, which may be imposed on the Fund, to segregate assets or enter into offsetting positions in connection with investments in derivatives. Such segregation will not limit the Fund's exposure to loss, and the Fund may incur investment risk with respect to the segregated assets to the extent that, but for the applicable segregation requirement, the Fund would sell the segregated assets.

Volatility Risk is the risk that, because the Fund may use some derivatives that involve economic leverage, this economic leverage will increase the volatility of a derivative instrument, as they may increase or decrease in value more quickly than the reference asset.

Emerging Markets Risk. Emerging markets investments are subject to the same risks as foreign investments and to additional risks due to greater political and economic uncertainties as well as a relative lack of information about companies in such markets. Securities traded on emerging markets are potentially illiquid and may be subject to volatility and high transaction costs.

Energy Sector Risk. Fund assets could be concentrated in the energy sector, which means the Fund could be more affected by the performance of the energy sector than a fund that is more diversified. Issuers in energy-related industries can be significantly affected by fluctuations in energy prices and supply and demand of energy fuels. Markets for various energy-related commodities can have significant volatility, and are subject to control or manipulation by large producers or purchasers. Companies in the energy sector may need to make substantial expenditures, and to incur significant amounts of debt, in order to maintain or expand their reserves. Oil and gas exploration and production can be significantly affected by natural disasters as well as changes in exchange rates, interest rates, government regulation, world events and economic conditions. These companies may be at risk for environmental damage claims.

Equity Risk. Equity holdings, which include common stocks, convertible securities, preferred stocks, warrants and sponsored and unsponsored ADRs may decline in value because of changes in the price of a particular holding or a broad stock market decline. Common stock ranks below preferred stock and debt securities in claims for dividends and for assets of the company in a liquidation or bankruptcy. The value of a security may decline for a number of reasons that directly relate to the issuer of a security or broader economic or market events including changes in interest rates.

Financials Sector Risk. Performance of companies in the financials sector may be adversely impacted by many factors, including, among others, government regulations, economic conditions, credit rating downgrades, changes in interest rates, and decreased liquidity in credit markets. The impact of more stringent capital requirements, recent or future regulation of any individual financial company, or recent or future regulation of the financials sector as a whole cannot be predicted.

Fixed-Income Securities Risk. The Fund may invest in fixed-income (debt) securities, which are generally subject to the following risks:

ABSOLUTE STRATEGIES FUND

Credit Risk. The financial condition of an issuer of a fixed-income security may cause the issuer to default. A decline in an issuer's credit rating may cause a decrease in the value of the security and an increase in investment risk and price volatility.

Extension Risk. If interest rates rise, repayments of principal on certain fixed-income securities may occur at a slower-than-expected rate and, as a result, the expected maturity of such securities could lengthen which could cause their value to decline.

Interest Rate Risk. An increase in interest rates typically causes a decrease in the value of fixed-income securities in which the Fund may invest. Given that interest rates are near historic lows, risks associated with rising rates are heightened.

Prepayment Risk. Prepayment of fixed-income securities, which is more common when interest rates are declining, may shorten such securities' maturity, reduce the Fund's return and cause the Fund to reinvest in lower yielding securities.

Variable and Floating Interest Rate Risk. Variable and floating rate securities may produce a leveraging effect or provide interest payments that vary inversely with market rates. Variable and floating rate securities may decline in value if interest rates in general or interest rates paid by them do not move as expected. Floating and variable rate securities may be called or redeemed by the issuer prior to maturity, which may result in the Fund having to reinvest proceeds in other investments at a lower interest rate. The Fund may suffer a loss if there is no active secondary market for any particular floating or variable rate security.

Foreign Investments Risk. The value of foreign investments may be affected by risks in addition to those affecting domestic investments, including the imposition of new, amended, or limited government regulations, changes in diplomatic relations between the U.S. and another country, political and economic instability, less favorable economic conditions, the imposition or tightening of exchange controls, trade barriers and other protectionist trade policies (including those in the U.S.), or other limitations on repatriation of foreign capital or nationalization and/or increased taxation or confiscation of investors' assets. Investments in securities of foreign issuers are subject to fluctuations in the value of the issuer's local currency relative to the U.S. dollar and may be subject to foreign withholding and other taxes.

Forward and Futures Contracts Risk. The primary risks associated with the use of forward and futures contracts are (i) the imperfect correlation between the price of the contract and the change in value of the underlying asset or index; (ii) possible lack of a liquid secondary market for a forward contract and the resulting inability to close such a contract when desired; (iii) losses caused by unanticipated market movements, which are potentially unlimited; (iv) the inability to predict correctly the direction of securities prices, interest rates, currency exchange rates, and other economic factors; (v) the possibility that the counterparty to a forward contract will default in the performance of its obligations; and (vi) if the Fund has insufficient cash, it may have to sell investments to meet daily variation margin requirements on a futures contract, and the Fund may also have to sell investments at a time when it may be disadvantageous to do so.

High Portfolio Turnover Risk. The Fund's strategy may result in high portfolio turnover rates, which may increase the Fund's brokerage commission costs and negatively impact the Fund's performance. Such portfolio turnover also may generate net short-term capital gains.

ABSOLUTE STRATEGIES FUND

Industrials Sector Risk. The value of securities issued by companies in the industrials sector may be adversely affected by supply and demand related to their specific products or services and industrials sector products in general. The products of manufacturing companies may face obsolescence due to rapid technological developments and frequent new product introduction. Government regulations, world events, economic conditions and exchange rates may adversely affect the performance of companies in the industrials sector. Companies in the industrials sector may be adversely affected by liability for environmental damage and product liability claims. Companies in the industrials sector, particularly aerospace and defense companies, may also be adversely affected by government spending policies because companies involved in this sector rely to a significant extent on government demand for their products and services.

Large Capitalization Company Risk. The Fund's investments in large capitalization companies may underperform other segments of the market because they may be less responsive to competitive challenges and opportunities and unable to attain high growth rates during periods of economic expansion.

Leverage Risk. Certain derivative transactions, such as those involving futures contracts, selling securities short, swap contracts, reverse repurchase agreements, dollar rolls, loans of portfolio securities, and the use of when-issued, delayed delivery or forward commitment transactions, may give rise to leverage, causing the Fund to be more volatile than if it had not been leveraged.

Liquidity Risk. The Fund may not be able to dispose of restricted, thinly traded and/or illiquid instruments at an appropriate time or at a reasonable price, which may result in a loss to the Fund. Liquidity can decline unpredictably and investments that are illiquid are typically more difficult to value than investments with more active markets.

Management Risk. The Fund's performance may deviate from overall market returns to a greater degree than other funds that do not employ an absolute return focus. Alternatively, if the Fund or a Subadviser takes a defensive posture by hedging its portfolio, then stock prices advance, the return to Fund investors may be lower than expected and lower than if the portfolio had not been hedged. Due to its active management, the Fund could underperform other funds with similar investment objectives.

Market Events Risk. Turbulence in the financial markets and reduced liquidity in equity, credit and fixed-income markets may negatively affect issuers worldwide, which could have an adverse effect on the Fund. In addition, there is a risk that policy changes by the Federal Reserve and/or other government actors, such as increasing interest rates, could cause increased volatility in financial markets, and higher levels of Fund redemptions, which could have a negative impact on the Fund. Trade barriers and other protectionist trade policies (including those in the U.S.) may also have a negative impact on the Fund.

Money Market Risk. Although a money market fund is designed to be a relatively low risk investment, it is not free of risk. Despite the short maturities and high credit quality of a money market fund's investments, increases in interest rates and deteriorations in the credit quality of the instruments the money market fund has purchased may reduce the money market fund's yield and can cause the price of a money market security to decrease. In addition, a money market fund is subject to the risk that the value of an investment may be eroded over time by inflation.

Multi-Manager Risk. The success of the Fund's strategy depends on, among other things, Absolute's skill in selecting Subadvisers and the Subadvisers' skill in executing the relevant strategy. The Subadvisers' strategies may be out of favor at any time. In addition, because the Subadvisers each make their trading decisions independently, it is possible that Subadvisers may purchase or sell the same security at the same time without aggregating their transactions. This may cause unnecessary brokerage and other expenses and the Fund may incur losses as a result.

ABSOLUTE STRATEGIES FUND

Options Risk. The price of an option, which is a function of interest rates, volatility, dividends, the exercise price, stock price and other market factors, may change rapidly over time. Price valuations or market movements may not justify purchasing options on individual securities, stock indexes or ETFs, or, if purchased, the options may expire unexercised, causing the Fund to lose the premium paid for the options. There may be an imperfect correlation between the prices of options and movements in the price of the securities (or indices) hedged or used for cover which may cause a given hedge not to achieve its objective. Over-the-counter options expose the Fund to counterparty risk.

Precious Metals Risk. The value of precious metals and securities related to precious metals is generally very volatile, and may be affected by government policy; economic, financial, social and political factors; and inflation. In addition, the Fund may incur higher custody and transaction costs for precious metals than for investments in securities.

Preferred Stock Risk. Preferred stock is a class of a capital stock that typically pays dividends at a specified rate. Preferred stock is generally senior to common stock, but subordinate to debt securities, with respect to the payment of dividends and on liquidation of the issuer. The market value of preferred stock generally decreases when interest rates rise and is also affected by the issuer's ability to make payments on the preferred stock.

Registered Investment Company and Exchange-Traded Funds Risk. The risks of investing in these securities typically reflect the risks of the types of instruments in which the investment companies or ETF invest. By investing in another investment company or ETF, the Fund becomes a shareholder of that investment company or ETF and bears its proportionate share of the fees and expenses of the other investment company or ETF. ETF shares trade in the secondary market and may be purchased by the Fund at a premium or discount to their NAV. When selling such securities, the Fund may not sell at the same premium or discount and may lose money on the premium or discount.

Repurchase and Reverse Repurchase Transactions Risk. The Fund may enter into repurchase and reverse repurchase transactions agreements. If the party agreeing to repurchase should default, the Fund may sell the underlying securities and incur procedural costs or delays in addition to any unrecoverable loss on the securities. Reverse repurchase agreements involve the risk that the market value of the securities sold by a Fund may decline below the price at which such Fund is obligated to repurchase the securities. Reverse repurchase agreements may be considered borrowing for some purposes and may result in leverage.

Restricted Securities Risk. Rule 144A securities are restricted securities and may be less liquid investments because such securities may not be readily marketable in broad public markets. The Fund may not be able to sell the restricted security when Absolute considers it desirable to do so and/or may have to sell the security at a lower price. A restricted security that was liquid when purchased may subsequently become illiquid. In addition, transaction costs may be higher for Rule 144A securities than for more liquid securities.

Rights and Warrants Risk. Rights and warrants may be considered more speculative than certain other types of investments in that they do not entitle a holder to dividends or voting rights with respect to the underlying securities that may be purchased nor do they represent any rights in the assets of the issuing company. Also, the value of a right or warrant does not necessarily change with the value of the underlying securities and a right or warrant ceases to have value if it is not exercised prior to the expiration date. If a right or warrant held by the Fund is not exercised by the date of its expiration, the Fund would lose the entire purchase price of the right or warrant. The market for warrants and rights may be very limited and there may at times not be a liquid secondary market for warrants and rights.

ABSOLUTE STRATEGIES FUND

Sector Risk. The Fund may invest a higher percentage of its total assets in one or more sectors. Developments affecting those sectors should be expected to impact the Fund more than a fund that is more broadly diversified and/or is not weighted in those sectors.

Short Selling Risk. If the Fund buys back a security it has sold short at a higher price, the Fund will incur a loss on the transaction. Because the loss on a short sale stems from increases in the value of the security sold short, the extent of such loss is theoretically unlimited. Short sales may decrease the liquidity of the Fund and may create leverage, which may cause relatively smaller adverse market movement to have a disproportionate impact on the Fund's performance.

Small and Mid-Sized Capitalization Company Risk. Investments in small and mid-sized capitalization companies may be less liquid, and the prices of such securities may fluctuate more than those of larger, more established companies. These factors could adversely affect the Fund's ability to sell such securities at a desirable time and price.

Swap Contract Risk. The use of swaps involves investment techniques and risks different from those associated with ordinary portfolio security transactions. In addition, each swap exposes the Fund to counterparty risk when a counterparty to a financial instrument entered into by the Fund may become bankrupt or otherwise fails to perform its obligations due to financial difficulties. As a result, the Fund may experience delays in or be prevented from obtaining payments owed to it pursuant to a swap contract.

Technology Sector Risk. Investments in technology companies are vulnerable to factors affecting the technology sector, such as dependency on consumer and business acceptance as new technology evolves, large and rapid price movements resulting from competition, rapid obsolescence of products and services and short product cycles. Many technology companies are small and at an earlier stage of development and, therefore, may be subject to risks such as those arising out of limited product lines, markets and financial and managerial resources.

Value Investment Risk. The Fund's investments in value securities are subject to the risk that they may remain undervalued for extended periods of time or never realize their full value. Different investment styles may shift in and out of favor, depending on market conditions and investor sentiment. The Fund's value approach could cause it to underperform funds that use a growth or non-value approach to investing or have a broader investment style.

Performance Information

The bar chart and table that follow provide some indication of the risks of investing in the Fund by showing changes in the performance of the Institutional Shares' of the Fund from year to year and by showing how the Fund's average annual returns compare with those of a broad measure of market performance. Updated performance information is available at www.absoluteadvisers.com or by calling (888) 99-ABSOLUTE or (888) 992-2765 (toll free).

Performance information represents only past performance and does not necessarily indicate future results.

ABSOLUTE STRATEGIES FUND

Annual Returns as of December 31
Institutional Shares

The calendar year-to-date total return as of June 30, 2018 was -0.60%.

During the period shown, the highest return for a quarter was 10.83% for the quarter ended June 30, 2009, and the lowest return was -9.59% for the quarter ended December 31, 2008.

Average Annual Total Returns
(For the periods ended December 31, 2017)

	1 Year	5 Year	10 Year
Institutional Shares - Return Before Taxes⁽¹⁾	-8.42%	-1.50%	0.18%
Institutional Shares - Return After Taxes on Distributions	-8.42%	-2.67%	-0.59%
Institutional Shares - Return After Taxes on Distributions and Sale of Fund Shares	-4.76%	-1.28%	0.04%
S&P 500 Index (reflects no deduction for fees, expenses or taxes)	21.83%	15.79%	8.50%
Bloomberg Barclays U.S. Aggregate Bond Index (reflects no deduction for fees, expenses or taxes)	3.54%	2.10%	4.01%
HFRX Global Hedge Fund Index (reflects no deduction for fees, expenses or taxes)	5.99%	2.12%	-0.41%
MSCI World Index (reflects no deduction for fees, expenses or taxes)	22.40%	11.64%	5.03%

⁽¹⁾ Effective August 1, 2018, Class R shares were converted, without any fee, load, or charge to shareholders, to shares of the Fund's Institutional Class.

S&P 500® Index is a broad-based, unmanaged measure of changes in stock market conditions based on the average performance of stocks of 500 large U.S. companies.

ABSOLUTE STRATEGIES FUND

Bloomberg Barclays U.S. Aggregate Bond Index is a broad-based market-value-weighted benchmark that measures the performance of the investment grade, U.S. dollar-denominated, fixed-rate taxable bond market. Sectors in the index include Treasuries, government-related and corporate securities, and mortgage backed securities.

HFRX Global Hedge Fund Index is designed to be representative of the overall composition of the hedge fund universe. It is comprised of all eligible hedge fund strategies, including but not limited to convertible arbitrage, distressed securities, equity hedge, equity market neutral, event driven, macro, merger arbitrage, and relative value arbitrage.

MSCI World® Index is an unmanaged index that is designed to capture large and mid cap representation across 23 developed market countries, including securities listed on exchanges in the U.S., Europe, Canada, Australia, New Zealand, and the Far East.

After-tax returns are calculated using the historical highest individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Actual after-tax returns depend on an investor's tax situation and may differ from those shown. After-tax returns shown are not relevant to investors who hold their Fund shares through tax-advantaged arrangements, such as 401(k) plans or individual retirement accounts.

The return after taxes on distributions and sale of Fund shares may exceed the return before taxes due to an assumed tax benefit from any losses on a sale of Fund shares at the end of the measurement period.

Management

Investment Adviser. Absolute Investment Advisers LLC is the Fund's investment adviser.

Subadvisers. Harvest Capital Strategies LLC; St. James Investment Company, LLC; and Tortoise Capital Advisors, L.L.C. are the Subadvisers to the Fund.

Portfolio Manager. Mr. Jay Compson, Principal of Absolute, is the portfolio manager of the Fund. Mr. Compson has managed the Fund since its commencement in July 2005.

Purchase and Sale of Fund Shares

You may purchase or sell (redeem) shares of the Fund on any day that the New York Stock Exchange (the "NYSE") is open for business. You may purchase or redeem shares directly from the Fund by calling (888) 99-ABSOLUTE or (888) 992-2765 (toll free) or writing to the Fund at Absolute Strategies Fund, P.O. Box 588, Portland, Maine 04112. You also may purchase or redeem shares of the Fund through your financial intermediary. The Fund accepts investments in the following minimum amounts:

	Minimum Initial Investment ⁽¹⁾⁽²⁾	Minimum Additional Investment ⁽¹⁾⁽²⁾
Standard Accounts	\$25,000	None
Retirement Accounts	\$25,000	None

⁽¹⁾ If you invest through a broker or other financial intermediary, the policies and fees of the intermediary may be different than the policies and fees of the Fund. Among other things, such financial intermediaries may charge transaction fees and may set different minimum investments or limitations on buying (selling) Fund shares. You

ABSOLUTE STRATEGIES FUND

should consult your broker or other representative of your financial intermediary for more information.

⁽²⁾ No initial or subsequent investment minimums for accounts maintained by financial institutions for the benefit of their clients who purchase shares through investment programs such as (1) fee-based advisory programs; (2) employee benefit plans like 401(k) retirement plans; (3) mutual fund platforms; and (4) consulting firms. No initial or subsequent investment minimum for Trustees or officers of the Trust, directors, officers and employees of Absolute, employees of the Subadvisers, and employees and affiliates of the Fund, or the distributor or any of their affiliates, or the spouse, sibling, direct ancestor, or direct descendent (collectively, “relatives”) of any such person, any trust or individual retirement account or self-employed retirement plan for the benefit of any such person or relative; or the estate of any such person or relative.

If deemed appropriate by the Trust officers, the Fund reserves the right to waive minimum investment amounts.

Tax Information

Shareholders may receive distributions from the Fund, which may be taxed to shareholders other than tax-advantaged investors (such as tax-advantaged retirement plans and accounts) as ordinary income, capital gains, or some combination of both. If you are investing through a tax-advantaged account, you may still be subject to taxation upon withdrawals from that account.

Payments to Broker-Dealers and Other Financial Intermediaries

If you purchase the Fund through a broker-dealer or other financial intermediary (such as a bank), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary’s website for more information.

ABSOLUTE STRATEGIES FUND

Details Regarding Principal Investment Strategies and Risks

The Fund seeks to achieve long-term capital appreciation with an emphasis on absolute (positive) returns and low sensitivity to traditional financial market indices such as the S&P 500® Index. The Fund's investment objective is non-fundamental and may be changed by the Board of Trustees without a vote of shareholders. The Fund, however, will provide shareholders with at least 60 days' notice prior to making any changes to the investment objective.

Additional Information Regarding Principal Investment Strategies

The Fund is designed for investors who seek a long-term investment with low sensitivity to traditional markets and who desire added diversification across multiple asset classes and strategies as a part of an overall disciplined investment program. The Fund may obtain exposure to a Subadviser's strategy by investing in a registered investment company managed by the Subadviser pursuant to the strategy.

The Fund will pursue absolute returns by allocating assets among a carefully chosen group of asset managers (the "Subadvisers") who employ a wide range of specialized investment strategies. Absolute allocates and reallocates assets of the Fund among its respective Subadvisers to attempt to maximize risk-adjusted returns while reducing the Fund's volatility and sensitivity to traditional markets. Absolute has primary responsibility for allocating Fund assets in a manner that attempts to diversify the Fund's portfolio across multiple strategies and investment styles that Absolute believes are complementary and, when combined, will produce risk-adjusted returns. To this end, Absolute will be responsible for selecting the Fund's Subadvisers and determining the portion of the Fund's assets to be allocated to each Subadviser.

Absolute reviews a wide range of factors when evaluating Subadvisers and establishing the asset allocation to each. These factors may include, but are not limited to, the following: risk-adjusted investment performance and capacity to adapt to various market conditions; well-defined and disciplined investment philosophy, strategy and process that have been consistently applied over time; portfolio characteristics and capacity of given strategy; consistency of investment style, purchase/sell discipline, risk management procedures; sensitivity and volatility of results as compared with other similar Subadvisers; business focus, stability and depth of investment professionals; and portfolio manager interviews and ongoing dialogue. While Absolute does not evaluate the merits of a Subadviser's individual investment decisions, it does monitor investment performance and style consistency.

Absolute has entered into subadvisory agreements with Subadvisers to the Fund, each chosen for its particular investment style(s). The Subadvisers may employ aggressive investment strategies and techniques and focus investments in certain securities sectors and geographical regions. The Subadvisers may also employ techniques, strategies and analyses based on relationships and correlations between and assumptions about securities, instruments, commodities, markets or other factors, or the occurrence of certain events. By combining the expertise of several Subadvisers through a "multi-manager" approach with Absolute's approach to diversification and risk management, the Fund attempts to provide long-term risk-adjusted investment returns with reduced volatility measured over a full market cycle. A full market cycle is generally considered to be the movement from a period of strong performance and rising prices through a period of weak performance and falling prices, then back again to a new period of strong performance. There can be no assurance that losses will be avoided.

Absolute retains the discretion to invest the Fund's assets in securities and other instruments directly consistent with any of the Fund's strategies or styles. Absolute may exercise this discretion in order to invest the Fund's assets pending allocation to a Subadviser, to hedge against overall fund exposures created by the Subadvisers, or to increase or reduce the Fund's net market or investment exposure or exposure to a particular issuer, sector or

ABSOLUTE STRATEGIES FUND

industry, including by employing leverage. These investments may be short-term and/or opportunistic in nature and are typically expressed through a combination of long and short index-related securities on various asset classes. Absolute may exercise its discretion over unallocated assets or may allocate to itself assets previously allocated to a Subadviser and Absolute may change such allocations at any time. There is no fixed or minimum allocation to any Subadviser. In the future, Absolute may remove Subadvisers or, subject to board approval, add Subadvisers. See “The Adviser and Subadvisers.”

From time to time, certain of the Subadvisers or their strategies may not be available for investment by the Fund due to, for example, such reasons as investment minimums, capacity limitations, regulatory limitations or other imposed constraints. Accordingly, the Fund may invest in high-quality, short-term debt securities or other cash instruments until Fund assets reach appropriate scale for optimal allocation.

The strategies and investment techniques employed by the Subadvisers in the aggregate, seek to produce absolute returns over a full market cycle while managing risk exposure. Although the Fund is not a hedge fund, such strategies are more commonly associated with hedge funds. These strategies may attempt to exploit disparities or inefficiencies in markets, geographical areas, and companies; take advantage of security mispricings or anticipated price movements; and/or benefit from cyclical themes and relationships or special situations and events (such as spin-offs or reorganizations). Such strategies may have low sensitivity to traditional markets because they seek investment opportunities and risks that are unrelated to traditional markets.

To manage risk or enhance return (including through leverage), the Fund may invest in derivatives. Some derivatives, such as exchange-traded futures and options on securities, commodities and indexes are standardized contracts that can readily be bought or sold, and whose market values are published daily. Non-standardized derivatives, such as swaps, tend to be more complex and harder to value. The Fund may invest in forwards, futures and options contracts and in equity, interest rate, index, credit default swap agreements and currency rate swap agreements. The Fund may invest in futures contracts on securities, commodities, and securities indices. The Fund may invest in options on securities, securities indices, commodities and futures.

Absolute or a Subadviser may decide to sell a position for various reasons, including when a company’s fundamental outlook deteriorates because of valuation and price considerations, for risk management purposes, or when a company is deemed to be misallocating capital. In addition, Absolute or a Subadviser may sell a position in order to meet shareholder redemptions.

Opportunistic and Long-Biased Equity Strategies seek to capitalize on underpriced equity securities (common stock, preferred stock, convertible securities, warrants, rights and sponsored or unsponsored American Depositary Receipts (“ADRs”)) or on positive market trends and may invest in certain securities markets, industries, company sizes, or geographical areas. Strategies are primarily managed for absolute return and Subadvisers typically assess risk and opportunity on an absolute, not an index-relative basis, by focusing on relatively few investments that a Subadviser believes are undervalued and either offer a margin-of-safety or high growth opportunities. Strategies may utilize short sales, options and futures and forward contracts to implement selective hedging and manage risk exposure. Strategies may also focus on special situations or events, including distressed equities.

“Distress” generally refers to some kind of stress surrounding the company and or/security. In the Adviser’s or a Subadviser’s opinion, this typically occurs when a company’s security price has declined significantly due to fundamental issues that may result in bankruptcy. The Fund may invest in distressed companies when it believes the security price of these companies becomes so low that they represent a good value. The risk associated with distressed equities is that the market does not recognize the value and price continues to decline despite the value

ABSOLUTE STRATEGIES FUND

in the price/valuation. See “Distressed Investments Risk,” below, for more information about the risks involved with investments in the securities of financially distressed issuers.

Long/Short Equity or Market Neutral Strategies attempt to neutralize exposure to general domestic market risk by primarily investing in common stocks that are undervalued and short selling stocks that are considered to be overvalued. Strategies may attempt to realize a valuation discrepancy in the relationship between multiple securities (relative value or value arbitrage), or may utilize quantitative factors to measure investment attractiveness among securities. Other qualitative and quantitative factors such as quality and momentum may be considered. Subadvisers intend to maintain approximately equal value or beta exposure in long and short positions, which will normally be obtained through short sales, in order to offset the effects of general stock market movements.

Convertible Arbitrage Strategies seek to take advantage of the pricing inefficiencies of the embedded option in a convertible bond. Convertible arbitrage involves purchasing a portfolio of convertible securities, generally convertible bonds, and hedging a portion of the default risk by selling short the underlying common stock. Subadvisers may utilize futures, options and credit default swaps in order to seek to manage interest rate exposures and employ leverage to increase returns. Certain Subadvisers may maintain a sector and market neutral portfolio. The average grade of bond in a convertible arbitrage portfolio is typically below investment grade with individual ratings ranging from AA to CCC. Such “junk bonds” typically are rated below Baa3 by Moody’s, BBB- by S&P or BBB- by Fitch.

Long/Short Hedged Equity Strategies invest in securities believed to be undervalued or offer high growth opportunities while also attempting to minimize overall market risk or take advantage of an anticipated decline in the price of an overvalued company or index by using short sales, futures or options. Strategies may use futures or options to hedge risk, increase or reduce the Fund’s investment exposure or obtain leverage. Long and short positions may not be invested in equal dollars and, as such, may not seek to neutralize general market risks. Certain strategies may focus on agriculture related sectors. At times, the Fund may have a long bias or a net short bias in equity sensitive investments.

Fixed Income, Long/Short Credit and Distressed Debt Strategies invest primarily in debt securities of domestic and foreign governments, agencies, and companies of all maturities and qualities, including high yield “junk bonds,” bank loans and other defaulted debt securities, convertible bonds, preferred stock, Treasury Inflation Protected Securities (“TIPS”) and emerging market debt or exchange-traded funds (“ETFs”) that invest in such securities. Bank loans may not be securities and therefore may not have the protection afforded by federal securities laws. Investments in bank loans involve credit risk, interest rate risk, liquidity risk, and other risks, including the risk that it may take more than seven days to settle any loan transaction. Debt securities of foreign governments are sometimes referred to as sovereign debt obligations and they may be issued or guaranteed by foreign governments or their agencies. The Fund may invest in mortgage-backed securities, collateralized mortgage obligations, asset-backed securities and other mortgage related securities (“Mortgage Related Securities”). Certain Mortgage Related Securities in which the Fund invests may be rated below investment grade (*i.e.*, junk bonds) or unrated, under-performing or distressed debt, equity securities issued by issuers of collateralized debt obligations and special situation investments, such as distressed corporate or sub-prime mortgage securities. Distressed securities may be in default or be issued by companies ranging from those undergoing restructurings in bankruptcy proceedings to those attempting to restructure out of court to those that are healthy but have short-term cash flow or liquidity problems. Such distressed or restructured securities may entitle holders to equity warrants or other forms of equity participation.

The Fund invests in both short-term and long-term debt, and is not limited as to the maturities or quality of the corporate debt securities in which it invests. In executing certain strategies, the Fund may short bonds of any credit quality or maturity. Strategies may also utilize credit default swaps to create short positions when a Subadviser

ABSOLUTE STRATEGIES FUND

anticipates a decline in the price of an overvalued security. The Fund may also purchase credit default swaps to enhance total return and lower volatility and may utilize treasury futures to manage interest rate risk.

Strategies may involve leverage and hedging through the use of ETFs, futures, credit default swaps, options on swaps, equities (and related equity options), total return swaps, or committed term reverse repurchase facilities, among other instrument types that the Subadviser believes may enhance total return. In connection with these strategies, the Fund may act as a buyer or seller of credit default swaps.

Other Strategies Pursuant to any of the above-described strategies, the Fund may trade frequently and may invest in a wide range of instruments, markets and asset classes in domestic and foreign markets. Investments generally include equity securities, fixed income securities and derivatives.

- The Fund may invest in equity securities of issuers of any market capitalization in the U.S. or abroad, including convertible, private placement/restricted, initial public offering (“IPOs”) and emerging market securities, with certain exposures to non-U.S. issuers obtained through investments in ADRs. The Fund may invest in pooled investment vehicles, including ETFs and other registered investment companies sponsored by Absolute and managed by the Subadviser pursuant to the strategies described above.
- The Fund may invest in fixed income securities of any credit quality and maturity, including those with fixed or variable terms and those of defaulted/distressed issuers and bank loans. These securities can be rated below investment grade (*i.e.*, “junk bonds”) and thus rated below Baa3 by Moody’s, BBB- by S&P or BBB- by Fitch Ratings Ltd. or unrated and securities in default.
- The Fund may invest in derivatives, which are financial instruments that have a value that depends upon, or is derived from, a reference asset, such as one or more underlying securities, pools of securities, options, futures, indexes or currencies. The most common types of derivatives in which the Fund may invest are forwards, options, futures and swaps contracts. The Fund’s forward contracts include forward currency contracts. The Fund’s swap agreements may include equity, interest rate, index, credit default and currency rate swap agreements. The Fund’s futures contracts may include futures on securities, commodities, and securities indices. The Fund’s options contracts may include options on securities, securities indices, commodities and futures. The Fund may purchase or write options. The Fund may invest in derivatives to hedge or reduce its exposure to a portfolio asset or risk, to obtain leverage for speculative purposes, to manage cash and/or as a substitute for taking a position in the reference asset or to gain exposure to certain asset classes, in which case the derivatives may have economic characteristics similar to those of the reference asset and the Fund’s investment in the derivatives may be applied toward meeting a requirement to invest a certain percentage of its net assets in instruments with such characteristics. Leverage generally involves the use of debt by the Fund to finance the purchase of investments and results in the Fund controlling substantially more assets than it has equity in an effort to increase returns. The Fund may also obtain leverage by investing an amount equivalent to short sale proceeds.

Options Contracts Options may be effected on an exchange or in the over-the-counter market. A call option is a contract under which the purchaser of the call option, in return for a premium paid, has the right to buy the security or commodity underlying the option at a specified price at any time during the term of the option. The writer of the call option, who receives the premium, has the obligation upon exercise of the option to deliver the underlying security or commodity against payment of the exercise price. The Fund may buy or write put and call options on securities, indexes and futures contracts. A put option gives its purchaser, in return for a premium, the right to sell the underlying security or commodity at a specified price during the term of the option. The writer of the put, who receives the premium, has the obligation to buy, upon exercise of the option, the underlying security or commodity at the exercise price. An index cash option involves the delivery of cash equal to the difference between the exercise price and the closing price of an index. An option on a futures contract gives the purchaser the right, in return for the premium paid,

ABSOLUTE STRATEGIES FUND

to assume a position in a futures contract at a specified exercise price at any time during the period of the option. The amount of a premium received or paid for an option is based upon certain factors including the market price of the underlying security or commodity, the relationship of the exercise price to the market price, the historical price volatility of the underlying security or commodity, the option period and interest rates.

Futures Contracts Futures contracts may be used for leveraging or hedging purposes. A futures contract is a bilateral agreement where one party agrees to accept, and the other party agrees to make, delivery of cash, securities or commodities, as called for in the contract, at a specified date and at an agreed upon price. An index futures contract involves the delivery of an amount of cash equal to a specified dollar amount multiplied by the difference between the index value at the close of trading of the contract and at the price designated by the futures contract. A treasury futures contract is a bilateral agreement where one party agrees to accept and the other party agrees to make delivery of a U.S. Treasury security, as called for in the agreement at a specified date and at an agreed upon price. Treasury futures contracts are used by the Fund to manage credit risk. Generally, futures contracts are closed out or rolled over prior to their expiration date.

Swap Agreements Swap agreements may be used for hedging or leveraging purposes. In a standard swap transaction, two parties agree to exchange the returns earned on specific assets, such as the return on, or the increase in value of, a particular dollar amount invested at a particular interest rate, in a particular foreign currency, or in a “basket” of securities representing a particular index. A swap contract may not be assigned without the consent of the counterparty. Credit default swaps (“CDS”) enable an investor to buy or sell protection against a credit event, such as an issuer’s failure to make timely payments on debt securities, bankruptcy or a restructuring. CDS are structured so that the “buyer” must pay the “seller” a periodic stream of payments over the term of the CDS provided no event of default by a selected entity (or entities) has occurred. In event of a default, the seller must pay the buyer the “par value” (full notional value) of the reference obligation in exchange for the reference obligation. The Fund may act as a buyer or seller of CDS. CDS involve greater risk than if the Fund had invested in the reference obligation directly.

Forward Contracts The Fund may use forward contracts to lock in an exchange rate for certain of its portfolio securities or to increase the Fund’s exposure to a currency that Absolute or a Subadviser believes is going to rise relative to the U.S. dollar. Thus, forward contracts may be used by the Fund for hedging or specialty purposes. Forward contracts involve the risk that anticipated currency movements will not be accurately predicted and will cause the Fund to sustain losses.

Absolute intends to limit the Fund’s trading in futures contracts, options on futures contracts, non-deliverable forwards, swaps and cash-settled foreign currency contracts (“Commodity Interests”) to comply with one of the two alternative limitations of the Commodity Futures Trading Commission’s amended Regulation 4.5 and claim an exclusion from the definition of the term commodity pool operator (“CPO”) under the Commodity Exchange Act (“CEA”) with respect to the Fund. The Fund therefore will not be subject to registration or regulation as a CPO under the CEA. Complying with the limitations may restrict Absolute’s ability to use Commodity Interests as part of the Fund’s investment strategies, though Absolute expects to be able to execute the Fund’s strategies within the limitations. Additional information regarding the Fund’s investments in Commodity Interests may be found in the Fund’s Statement of Additional Information (the “SAI”).

Non-Principal Investment Strategies

Absolute may also allocate the Fund’s portfolio across additional strategies and investment styles that Absolute believes are complementary and, when combined, will produce risk-adjusted returns.

ABSOLUTE STRATEGIES FUND

Special Situations Strategies involve making evaluations and predictions about both the likelihood that a particular event, such as a merger, acquisition, bankruptcy or other significant event in the life of a company, will occur and the impact such event will have on the value of the company's securities. Subadvisers may focus on relatively few investments believed to be undervalued and may invest in securities of companies involved in special situations, including companies involved in (or the target of) acquisition attempts, tender offers, work-outs, liquidations, spin-offs, reorganizations, bank loans, bankruptcies, exchanges and similar transactions. Such investments may involve a long-term time horizon as well as idiosyncratic event risk. In addition to common stock, strategies may invest in warrants, options and credit default swaps and the Fund may act as a buyer or seller of credit default swaps.

Temporary Defensive Position. In order to respond to adverse market, economic, political or other conditions, the Fund may assume a temporary defensive position that is inconsistent with its principal investment objective and/or strategies and may invest, without limitation, in cash or high-quality cash equivalents (including money market instruments, commercial paper, certificates of deposit, banker's acceptances and time deposits). A defensive position, taken at the wrong time, may have an adverse impact on the Fund's performance. The Fund may be unable to achieve its investment objective during the employment of a temporary defensive position.

Additional Information Regarding Principal Investment Risks

The Fund's net asset value ("NAV") and investment return will fluctuate based upon changes in the value of its portfolio. You could lose money on your investment in the Fund, and the Fund could underperform other investments. There is no guarantee that the Fund will meet its investment objective. An investment in the Fund is not a deposit of a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency.

ADR Risk. Investing in ADRs may involve risks relating to political, economic or regulatory conditions in foreign countries where the underlying securities are traded. These risks include fluctuations in foreign currencies, political and financial instability, less liquidity, lack of uniform accounting, auditing and financial reporting standards and increased price volatility. The underlying securities are typically denominated (or quoted) in a currency other than U.S. dollars. The securities underlying ADRs may trade on foreign exchanges at times when U.S. markets are not open for trading. As a result, the value of ADRs may not track the price of the underlying foreign securities and may change materially at times when the U.S. markets are not open for trading. Unsponsored ADRs may involve additional risks, and their prices may be more volatile than the prices of sponsored ADRs.

Agricultural Industry Investment Risk. Stocks of companies in the agricultural industry will be susceptible to market and other conditions that affect the agriculture industry and, therefore, the market value of these companies will often be based more on the condition of, and consumers' confidence in, the economy as a whole, rather than on the value of underlying assets held by companies in the agriculture industry. The market value of these companies may also be negatively affected by such factors as the industry's seasonal nature, misjudgments in fashion trends, or an inability on the part of the companies to distinguish themselves in competitive markets. Some companies' viability may depend on their ability to obtain financing during temporary economic slow-downs.

Cash and Cash Equivalents Holdings Risk. To the extent the Fund holds cash and cash equivalents positions, even strategically, the Fund risks achieving lower returns and potential lost opportunities to participate in market appreciation, which could negatively impact the Fund's performance and ability to achieve its investment objective. This is particularly true when the market for other investments in which the Fund may invest is rapidly rising. Holding cash subjects the Fund to the credit risk of the depository institution.

ABSOLUTE STRATEGIES FUND

Commodities Risk. Exposure to the commodities markets may subject the Fund to greater volatility than investments in traditional securities. Commodities-related instruments are subject to substantial price fluctuations over short periods of time and may be affected by unpredictable economic, political and environmental events. Factors that may significantly affect the prices of commodities include, but are not limited to: changes in overall market movements, resource availability, commodity price volatility, speculation in the commodities markets, domestic and foreign political and economic events and policies, war, acts of terrorism, changes in domestic or foreign interest rates and/or investor expectations concerning interest rates, domestic and foreign inflation rates and investment and trading activities in commodities.

Convertible Securities and Arbitrage Risk. Convertible securities, which are a form of hybrid security, entail some of the risks of both equity and debt securities, such as credit risk, market events risk, and counterparty risk. While fixed-income securities generally have a priority claim on a corporation's assets over that of common stock, some of the convertible securities which the Fund may hold are high-yield/high-risk ("junk bond") securities that are subject to special risks, including the risk of default in interest or principal payments which could result in a loss of income from or a decline in the market value of, the securities. In addition, convertible securities often display a degree of market price volatility that is comparable to common stocks. The credit risk associated with convertible securities generally is reflected by their ratings by organizations such as Moody's or S&P or a similar determination of creditworthiness by a Subadviser. The market value of convertible securities may change based on changes in the issuer's credit rating or the market's perception of the issuer's creditworthiness. The credit rating of a company's convertible securities is generally lower than that of its non-convertible debt securities. Convertible securities are normally considered "junior" securities, so the company usually must pay interest on its non-convertible debt securities before it can make payments on its convertible securities. If the issuer stops paying interest or principal, convertible securities may become worthless and the Fund could lose its entire investment. The value of convertible securities tends to decline as interest rates rise and, because of the conversion feature, tends to vary with fluctuations in the market value of the underlying securities.

Arbitrage strategies involve the risk that underlying relationships between securities in which investment positions are taken may change in an adverse or unanticipated manner. In addition, an individual arbitrage investment may be affected by the length of time that the Fund's assets must be committed to that investment and unanticipated delays in that investment due to delays in any underlying transactions of that investment could cause the Fund to lose money. The expected gain on an individual arbitrage investment may be smaller than the possible loss.

Contingent Convertible Securities Risk. Contingent convertible securities ("CoCos") are hybrid debt securities that are a form of preferred securities. Cocos are intended to either convert into equity or have their principal written down upon the occurrence of certain "triggers." The triggers are generally linked to regulatory capital thresholds or regulatory actions calling into question the issuing banking institution's continued viability as a going-concern if the conversion trigger were not exercised. CoCos' unique equity conversion or principal write-down features are tailored to the issuing banking institution and its regulatory requirements. Some additional risks associated with CoCos include, but are not limited to, the following:

- The occurrence of a conversion event is inherently unpredictable and depends on many factors, some of which will be outside the issuer's control. Because of the uncertainty regarding whether a conversion event will occur, it may be difficult to predict when, if at all, a CoCo will be converted to equity, and a fund may suffer losses as a result.
- CoCos may have no stated maturity and fully discretionary coupons. This means coupon (*i.e.*, interest) payments can be canceled at the banking institution's discretion or at the request of the relevant regulatory authority in order to help the bank absorb losses, without causing a default.

ABSOLUTE STRATEGIES FUND

- CoCos are usually issued in the form of subordinated debt instruments to provide the appropriate regulatory capital treatment. If an issuer liquidates, dissolves or winds-up before a conversion to equity has occurred, the rights and claims of the holders of the CoCos (such as a fund) against the issuer generally rank junior to the claims of holders of unsubordinated obligations of the issuer. In addition, if the CoCos are converted into the issuer's underlying equity securities after a conversion event (*i.e.*, a "trigger"), each holder will be further subordinated.
- The value of CoCos is unpredictable and is influenced by many factors including, without limitation: the creditworthiness of the issuer and/or fluctuations in such issuer's applicable capital ratios; supply and demand for CoCos; general market conditions and available liquidity; and economic, financial and political events that affect the issuer, its particular market or the financial markets in general.

Due to these features, CoCos may have substantially greater risk than other securities in times of financial stress. If the trigger level is breached, the issuer's decision to write down, write off or convert a CoCo may be outside a fund's control, and a fund may suffer a complete loss on an investment in CoCos with no chance of recovery even if the issuer remains in existence.

Counterparty Risk. The Fund may enter into financial instruments or transactions with a counterparty. A counterparty may become bankrupt or otherwise fail to perform its obligations due to financial difficulties, jeopardizing the value of the Fund's investment. The Fund may experience significant delays in recovering an investment in a bankruptcy or other reorganization proceeding, and recover only a limited amount or none of its investment in such circumstances.

Derivatives Risk. Derivatives are financial instruments that have a value which depends upon, or is derived from, a reference asset, such as one or more underlying securities, pools of securities, options, futures, indexes or currencies. Derivatives may result in investment exposures that are greater than their cost would suggest; in other words, a small investment in a derivative may have a large impact on the Fund's performance. Derivatives can create leverage, which can magnify the impact of a decline in the value of the reference instrument underlying the derivative, and the Fund could lose more than the amount it invests. Derivatives can have the potential for unlimited losses, including, for example, where the Fund may be called upon to deliver a security it does not own. Derivatives can be difficult to value and may at times be highly illiquid, and the Fund may not be able to close out or sell a derivative at a particular time or at an anticipated price. Derivatives may involve fees, commissions, or other costs that may reduce the Fund's gains (if any) from the derivatives. Derivatives that have margin requirements involve the risk that if the Fund has insufficient cash or eligible margin securities to meet daily variation margin requirements, it may have to sell securities from its portfolio at a time when it may be disadvantageous to do so. The Fund may remain obligated to meet margin requirements until a derivatives position is closed. In addition, the Fund's use of derivatives may have different tax consequences for the Fund than an investment in the reference instruments, and those differences may increase the amount and affect the timing and character of taxable distributions payable to shareholders. The successful use of derivatives generally depends on a Subadviser's ability to predict market movements.

Derivatives are subject to a number of risks described elsewhere in this section, such as liquidity risk, interest rate risk, credit risk, and general market risks. The Fund's use of derivatives may also expose the Fund to greater or different risks including the following:

Correlation Risk is the risk that derivative instruments may be mispriced or improperly valued and that changes in value of the derivatives may not correlate perfectly with the underlying asset or security.

ABSOLUTE STRATEGIES FUND

Credit Derivative Risk is the risk associated with the use of credit derivatives, which is a highly specialized activity that involves strategies and risks different than those with ordinary portfolio security transactions. If Absolute or a Subadviser is incorrect in its forecast of default risks, market spreads or other applicable factors, the Fund's investment performance would diminish compared with what it would have been if these techniques were not used. Moreover, even if Absolute or a Subadviser is correct in its forecast, there is a risk that a credit derivative position may correlate imperfectly with the price of the asset or liability being hedged. The Fund's risk of loss in a credit derivative transaction varies with the form of the transaction and may be significant.

Hedging Risk is the risk that derivative instruments used to hedge against an opposite position may offset losses, but they also may offset gains. Hedges may not be perfect and typically include expenses.

Segregation Risk is the risk associated with any requirements, which may be imposed on the Fund, to segregate assets or enter into offsetting positions in connection with investments in derivatives. Such segregation will not limit the Fund's exposure to loss, and the Fund may incur investment risk with respect to the segregated assets to the extent that, but for the applicable segregation requirement, the Fund would sell the segregated assets. If the Fund is required to segregate assets equal to only the current market value of its obligation under a derivative, the Fund may be able to use derivatives to a greater extent than if it were required to segregate assets equal to the full notional value of such derivative, which would increase the degree of leverage the Fund could undertake through derivatives and otherwise.

Volatility Risk is the risk that, because the Fund may use some derivatives that involve economic leverage, this economic leverage will increase the volatility of a derivative instrument, as they may increase or decrease in value more quickly than the reference asset.

Energy Sector Risk. The Fund's assets could be concentrated in the energy sector, which means the Fund could be more affected by the performance of the energy sector than a fund that is more diversified. Issuers in energy-related industries can be significantly affected by fluctuations in energy prices and supply and demand of energy fuels caused by geopolitical events, energy conservation or use of alternative fuel sources, the success of exploration projects, weather or meteorological events, taxes, increased governmental or environmental regulation, resource depletion, rising interest rates, declines in domestic or foreign production, accidents or catastrophic events, or terrorist threats or attacks, among others. Markets for various energy related commodities can have significant volatility, and are subject to control or manipulation by large producers or purchasers. Furthermore, companies in the energy sector may need to make substantial expenditures, and to incur significant amounts of debt, in order to maintain or expand their reserves through exploration of new sources of supply, through the development of existing sources, through acquisitions, or through long-term contracts to acquire reserves. Factors adversely affecting producers, refiners, distributors, or others in the energy sector may affect adversely companies that service or supply those entities, either because demand for those services or products is curtailed, or those services or products come under price pressure.

Equity Risk. Equity holdings, including common stocks, convertible securities, preferred stocks, warrants and sponsored and unsponsored ADRs, and REITs may decline in value because of changes in price of a particular holding or a broad stock market decline. These fluctuations could be a drastic movement or a sustained trend. The value of a security may decline for a number of reasons that directly relate to the issuer of a security, such as management performance, financial leverage and reduced demand for the issuer's goods or services, or broader economic or market events, including changes in interest rates. Common stocks in general are subject to the risk of an issuer liquidating or declaring bankruptcy, in which case the claims of owners of the issuer's debt securities and preferred stock take precedence over the claims of common stockholders.

ABSOLUTE STRATEGIES FUND

Financials Sector Risk. Performance of companies in the financials sector may be adversely impacted by many factors, including, among others, government regulations, economic conditions, credit rating downgrades, changes in interest rates, and decreased liquidity in credit markets. The impact of more stringent capital requirements, recent or future regulation of any individual financial company, or recent or future regulation of the financials sector as a whole cannot be predicted.

Fixed-Income Securities Risk. The value of fixed-income (debt) securities depends generally on an issuer's credit rating and the interest rate of the security. Fixed-income securities are generally subject to the following risks:

Credit Risk. The financial condition or perceived financial condition of an issuer of a fixed-income security may cause the issuer to default or become unable to pay interest or principal due on the security. If an issuer defaults, a fixed-income security could lose all of its value, be renegotiated at a lower interest rate or principal amount or become illiquid. Generally, investment risk and price volatility increase as a fixed-income security's credit rating declines, which can cause the price of fixed-income securities to go down.

Extension Risk. If interest rates rise, repayments of principal on certain fixed-income securities may occur at a slower-than-expected rate and, as a result, the expected maturity of such securities could lengthen which could cause their value to decline.

Interest Rate Risk. The value of fixed-income securities may decline due to changes in prevailing interest rates. An increase in interest rates typically causes a decrease in the value of fixed-income securities in which the Fund may invest. Fixed-income securities with longer durations tend to be more sensitive to changes in interest rates, generally making them more volatile than fixed-income securities with shorter durations. The Fund may be subject to a greater risk of rising interest rates due to the current period of historically low rates. The longer the duration of the Fund's debt securities, the more sensitive the Fund will be to interest rate changes.

Prepayment Risk. Fixed-income securities may be subject to unanticipated prepayment, shortening the effective maturity of the security. As a result, prepayments may reduce the return on investment and cause increased price volatility in fixed-income securities. Such prepayments often occur during periods of declining interest rates, and may cause the Fund to reinvest its assets in lower yielding securities.

Variable and Floating Interest Rate Risk. The interest rates of variable rate securities may reset or move at specified intervals, while the interest rates on floating rate securities may reset whenever there is a change in a specified index rate, such as LIBOR. In most cases, these reset provisions reduce the impact of changes in market interest rates on the value of the security. However, some securities do not directly track an underlying index, but reset based on formulas that may produce a leveraging effect; and others may also provide for interest payments that vary inversely with market rates. Variable and floating rate securities may decline in value if interest rates in general or interest rates paid by them do not move as expected. When the Fund holds variable or floating rate securities, a decrease (or, in the case of inverse floating rate securities, an increase) in market interest rates will adversely affect the income received from such securities and the net asset value of the Fund's shares. In response to an interest rate decline, certain floating and variable rate securities may be called or redeemed by the issuer prior to maturity, which may result in the Fund having to reinvest proceeds in other investments at a lower interest rate. There may not be an active secondary market for any particular floating or variable rate security, which could make it difficult to dispose of the security and cause the Fund to suffer a loss.

Foreign Investments Risk. The value of foreign investments may be affected by risks in addition to those affecting domestic investments, including the imposition of new or amended government regulations, changes in diplomatic

ABSOLUTE STRATEGIES FUND

relations between the U.S. and another country, political and economic instability, the imposition or tightening of exchange controls or other limitations on repatriation of foreign capital or nationalization, trade barriers and other protectionist trade policies (including those in the U.S.) and/or increased taxation or confiscation of investors' assets. Investments in securities of foreign issuers are subject to the risk that an issuer's securities may not reflect the issuer's condition because there is not sufficient publicly available information about the issuer. This risk may be greater for investments in issuers in emerging or developing markets due to lower liquidity and higher likelihood of hyperinflation and currency devaluations. The Fund may have limited or no legal recourse in the event of default with respect to certain foreign securities. In addition, key information about the issuer, the markets or the local government or economy may be unavailable, incomplete or inaccurate. Investments in securities of foreign issuers are subject to fluctuations in the value of the issuer's local currency relative to the U.S. dollar and may be subject to foreign withholding and other taxes. Trading in foreign markets typically involves higher expense than trading in the United States. Settlement and clearance procedures in certain foreign markets may result in delays in payment or delivery of securities.

Forward and Futures Contracts Risk. The primary risks associated with the use of forward and futures contracts are (i) the imperfect correlation between the price of the contract and the change in value of the underlying asset or index; (ii) possible lack of a liquid secondary market for a forward or futures contract and the resulting inability to close such a contract when desired; (iii) losses caused by unanticipated market movements, which are potentially unlimited; (iv) the inability to predict correctly the direction of securities prices, interest rates, currency exchange rates, and other economic factors; (v) the possibility that the counterparty to a forward contract will default in the performance of its obligations; and (vi) if the Fund has insufficient cash, it may have to sell investments to meet daily variation margin requirements on a futures contract, and the Fund may have to sell investments at a time when it may be disadvantageous to do so. Index futures based upon a narrower index of securities may present greater risks than futures based on broad market indices, as narrower indices are more susceptible to rapid and extreme fluctuations as a result of changes in the value of a small number of securities.

High Portfolio Turnover Risk. The Fund's investment strategy may result in high portfolio turnover rates. This may increase the Fund's brokerage commission costs. The performance of the Fund could be negatively impacted by the increased brokerage commission cost incurred by the Fund. Rapid portfolio turnover also exposes shareholders to a higher current realization of short-term capital gains, distributions of which would generally be taxed to you as ordinary income and thus cause you to pay higher taxes.

Industrials Sector Risk. The value of securities issued by companies in the industrials sector may be adversely affected by supply and demand related to their specific products or services and industrials sector products in general. The products of manufacturing companies may face obsolescence due to rapid technological developments and frequent new product introduction. Government regulations, world events, economic conditions and exchange rates may adversely affect the performance of companies in the industrials sector. Companies in the industrials sector may be adversely affected by liability for environmental damage and product liability claims. Companies in the industrials sector, particularly aerospace and defense companies, may also be adversely affected by government spending policies because companies involved in this sector rely to a significant extent on government demand for their products and services.

Large Capitalization Company Risk. Investments in large capitalization companies may go in and out of favor based on market and economic conditions and may underperform other market segments. Some large capitalization companies may be unable to respond quickly to new competitive challenges or to attain the high growth rate of successful smaller companies, especially during extended periods of economic expansion. As such, returns on

ABSOLUTE STRATEGIES FUND

investments in stocks of large capitalization companies could trail the returns on investments in stocks of small and mid-sized capitalization companies.

Leverage Risk. Leverage transactions, including futures contracts, selling securities short, swap contracts, reverse repurchase agreements, dollar rolls, loans of portfolio securities, and the use of when-issued, delayed delivery or forward commitment transactions, create the risk of magnified capital losses. The use of leverage may increase (or decrease) the Fund's return when the Fund earns a greater (or lesser) return on leveraged investments than the cost of the leverage. The effect of leverage on the Fund's returns may be magnified by market movements or changes in the cost of leveraging. Changes in interest rates and similar economic factors could cause the relationship between the cost of leveraging and the yield on leveraged investments to change in a manner that is unfavorable for the Fund. The Fund's current investment income may not be sufficient to meet the interest expense of leveraging, and it may be necessary for the Fund to liquidate certain of its investments at an inopportune time. Leverage may exaggerate the effect of a change in the value of the Fund's portfolio securities, causing the Fund to be more volatile than if leverage was not used. Leverage may also involve the creation of liability that requires the Fund to pay interest. The Fund will, where required, reduce leverage risk by either segregating an equal amount of liquid assets or "covering" the transactions that introduce such risk.

Liquidity Risk. Less liquid and restricted securities may have no active trading market, limitations on resale, and the Fund may have to register a restricted security in order to dispose of it, resulting in expense and delay. Restricted and illiquid securities are extremely difficult to value and are not subject to disclosure or other investor protection requirements. The Fund may not be able to dispose of restricted, thinly traded, or illiquid securities promptly and/or may only be able to do so at substantial discounts. As a result, the Fund may experience difficulty satisfying redemption requests. Significant positions in other instruments, including those in which there is low trading volume, also may be difficult for the Fund to liquidate and result in losses for the Fund.

Management Risk. The Fund is actively managed and its performance will reflect Absolute's and the Subadvisers' ability to make investment decisions that are suited to achieving the Fund's investment objective. Investments selected by the Adviser for the Fund may not perform to expectations. This could result in the Fund's underperformance compared to other funds with similar investment objectives. Further, the Fund's performance may deviate from overall market returns to a greater degree than funds that do not employ a similar strategy.

Market Events Risk. Turbulence in the financial markets and reduced liquidity in equity, credit and fixed-income markets may negatively affect issuers worldwide, which could have an adverse effect on the Fund. Following the financial crisis that began in 2007, the Federal Reserve attempted to stabilize the U.S. economy and support the U.S. economic recovery by keeping the federal funds rate at or near zero percent. As the Federal Reserve raises the federal funds rate, there is a risk that interest rates across the U.S. financial system will rise. Geopolitical events may expose markets to heightened volatility, have significant impact on world financial matters, and may reduce liquidity for certain Fund investments, causing the value of the Fund's investments and share price to decline. Such policy changes include the United Kingdom's vote to leave the European Union (the "EU"), commonly referred to as "Brexit," and its effect on the United Kingdom and European economies will likely depend on the nature of trade relations with the EU and other major economies following its exit, which are matters to be negotiated. These policy changes may expose markets to heightened volatility, have significant impact on world financial matters and may reduce liquidity for certain Fund investments, causing the value of the Fund's investments and share price to decline. To the extent that the Fund experiences high redemptions because of these governmental policy changes, the Fund may experience increased portfolio turnover, which will increase the costs that the Fund incurs and will lower the Fund's performance. Trade barriers and other protectionist trade policies (including those in the U.S.) may also have a negative impact on the Fund.

ABSOLUTE STRATEGIES FUND

Money Market Risk. Although a money market fund is designed to be a relatively low risk investment, it is not free of risk. Despite the short maturities and high credit quality of a money market fund's investments, increases in interest rates and deteriorations in the credit quality of the instruments the money market fund has purchased may reduce the money market fund's yield and can cause the price of a money market security to decrease. In addition, a money market fund is subject to the risk that the value of an investment may be eroded over time by inflation.

Multi-Manager Risk. The methodology by which Absolute allocates Fund assets may not achieve desired results and may cause the Fund to lose money or underperform other funds. In addition, the Subadvisers make their trading decisions independently, and, as a result, it is possible that one or more Subadviser(s) may take positions in the same security or purchase/sell the same security at the same time without aggregating their transactions. This may cause unnecessary brokerage and other expenses, and the Fund may incur losses as a result.

Options Risk. The success of the Fund's investment in options depends upon many factors, such as the price of the options, which is a function of interest rates, volatility, dividends, the exercise price, stock price and other market factors. These factors may change rapidly over time. When the Fund writes a covered call option, it assumes the risk that it will have to sell the underlying instrument at an exercise price that may be lower than the market price of the instrument, and it gives up the opportunity to profit from a price increase in the underlying instrument above the exercise price. If a call option that the Fund has written is exercised, the Fund will experience a gain or loss from the sale of the underlying instrument. In the case of an uncovered call option, there is a risk of unlimited loss. When an uncovered call is exercised, the Fund must purchase the underlying instrument to meet its call obligations and the necessary instruments may be unavailable for purchase. If a call option that the Fund has written expires unexercised, the Fund will experience a gain in the amount of the premium it received; however, that gain may be offset by a decline in the market value of the underlying instrument during the option period.

When the Fund writes a put option, it assumes the risk that it will have to purchase the underlying instrument at an exercise price that may be higher than the market price of the instrument. If the market price of the underlying instrument declines, the Fund would expect to suffer a loss. However, the premium the Fund received for writing the put should offset a portion of the decline. There may also be an imperfect correlation between the prices of options and movements in the price of the securities (or indices) hedged or used for cover which may cause a given hedge not to achieve its objective. In addition, each over-the-counter ("OTC") option exposes the Fund to counterparty risk, and Absolute may determine to concentrate any or all of its OTC option transaction with a single counterparty or a small group of counterparties. If a counterparty defaults, the Fund's only recourse will be to pursue contractual remedies against the counterparty, and the Fund may be unsuccessful in its pursuit. The Fund thus assumes the risk that it may be delayed in or prevented from obtaining payments owed to it pursuant to an OTC options transaction.

Precious Metals Risk. Prices of precious metals and of precious metal-related securities are often very volatile. The production and sale of precious metals by governments or central banks or other larger holders can be affected by various economic, financial, social and political factors, which may be unpredictable and may have a significant impact on the prices of precious metals. Other factors that may affect the prices of precious metals and securities related to them include changes in inflation, the outlook for inflation and changes in industrial and commercial demand for precious metals. The Fund may incur higher custody and transaction costs for precious metals than for securities.

Preferred Stock Risk. If interest rates rise, the dividend on preferred stock may be less attractive, causing the price of preferred stock to decline. Preferred stock may have mandatory sinking fund provisions, as well as provisions for their call or redemption prior to maturity, which can have a negative effect on their prices when interest rates decline. Preferred stocks are equity securities because they do not constitute a liability of the issuer and therefore do not offer

ABSOLUTE STRATEGIES FUND

the same degree of protection of capital or continuation of income as debt securities. Unlike debt securities, preferred stock dividends are payable at the discretion of the issuer's board of directors. The market prices of preferred stocks are generally more sensitive to actual or perceived changes in the issuer's financial condition or prospects than are the prices of debt securities. Preferred stock also may be less liquid than common stock. The rights of preferred stock on distribution of an issuer's assets in the event of its liquidation are generally subordinated to the rights associated with an issuer's debt securities. Preferred stock may also be subject to the risk that the issuer is unable or unwilling, or is perceived (whether by market participants, ratings agencies, pricing services or otherwise) as unable or unwilling, to make timely principal and/or interest payments, or otherwise honor its obligations.

Registered Investment Company and Exchange-Traded Funds Risk. The risks of investing in these securities typically reflect the risks of the types of instruments in which the investment companies or ETFs invest. When the Fund invests in investment company or ETF securities, shareholders of the Fund bear their proportionate share of their fees and expenses, as well as their share of the Fund's fees and expenses. As a result, an investment by the Fund in an investment company or ETF could cause the cost of investing in the Fund to be higher and, in turn, performance to be lower than if the Fund were to invest directly in the instruments underlying the investment company or ETF. To the extent that the Fund invests in any investment company or ETF sponsored by Absolute or its affiliates, Absolute may waive certain fees and expenses.

Because ETF shares are listed and traded on national stock exchanges, they may trade at a discount or premium to their NAV. Investments in ETFs are subject to brokerage and other trading costs, which could result in greater expenses to the Fund. The trading in an ETF may be halted if the trading in one or more of the ETF's underlying securities is halted. Finally, because the value of ETF shares depends in part on the demand for them in the market, Absolute may not be able to liquidate an ETF position at the NAV of the ETF, adversely affecting the Fund's performance.

Repurchase and Reverse Repurchase Transactions Risk. The Fund may enter into repurchase and reverse repurchase transactions agreements. The risks associated with these types of transactions arise if the other party to the agreement defaults or goes bankrupt and the Funds experience losses or delays in recovering their investments. In a repurchase transaction, the Fund could incur a loss if the value of the securities sold has increased in value relative to the value of the cash or collateral held by the Fund. In the case of a reverse repurchase agreement, the Fund could incur a loss if the value of the securities purchased by the Fund has decreased in value relative to the value of the collateral held by the Fund. Reverse repurchase agreements may increase fluctuations in the Fund's NAV and may be considered borrowing for some purposes and create the risk of magnified capital losses. The use of leverage may decrease (or increase) the Fund's return when the Fund earns a lesser (or greater) return on leveraged investments than the cost of the leverage. See Leverage Risk for more information.

Restricted Securities Risk. Rule 144A securities, which are restricted securities, may be less liquid investments than registered securities because Rule 144A securities may not be readily marketable in broad public markets. A Rule 144A restricted security carries the risk that the Fund may not be able to sell the security when the portfolio manager considers it desirable to do so and/or may have to sell the security at a lower price. In addition, transaction costs may be higher for Rule 144A securities than for more liquid securities. Although there is a substantial institutional market for Rule 144A securities, it is not possible to predict exactly how the market for Rule 144A securities will develop. A restricted security that when purchased was liquid in the institutional markets may subsequently become illiquid.

Rights and Warrants Risk. Rights and warrants may be considered more speculative than certain other types of investments in that they do not entitle a holder to dividends or voting rights with respect to the underlying securities that may be purchased nor do they represent any rights in the assets of the issuing company. Also, the value of a right or warrant does not necessarily change with the value of the underlying securities and a right or warrant ceases to

ABSOLUTE STRATEGIES FUND

have value if it is not exercised prior to the expiration date. If a right or warrant held by the Fund is not exercised by the date of its expiration, the Fund would lose the entire purchase price of the right or warrant. The market for warrants and rights may be very limited and there may at times not be a liquid secondary market for warrants and rights.

Sector Risk. The Fund may invest a higher percentage of its total assets in one or more sectors. The industries that comprise a sector may react similarly to changes in market conditions such as economic, political or regulatory events. Therefore, the value of the Fund's portfolio investments may be more sensitive to such events, which may result in greater risk to the Fund.

Short Selling Risk. The Fund may engage in short sales of securities by borrowing a security and then selling it. If the Fund buys back the security at a higher price, the Fund will incur a loss on the transaction. Short sales may involve additional transactions costs and other expenses that may exceed the return on the position, which may cause the Fund to lose money. Short sales may decrease the liquidity of certain securities or positions, or the Fund as a whole, and may lower the Fund's returns or result in a loss. A short sale may create leverage and as a result, may cause relatively smaller adverse market movement to have a disproportionate impact on the Fund's performance.

In addition, when the Fund is selling stocks short, it must maintain a segregated account with its custodian of cash and/or high-grade securities equal to the current market value of the stocks sold short less any collateral deposited with the Fund's broker. As a result, the Fund may maintain high levels of cash or liquid assets (such as U.S. Treasury bills, money market accounts, repurchase agreements, certificates of deposit, high quality commercial paper and long equity positions) for collateral needs.

Small and Mid-Sized Capitalization Company Risk. Investments in small and mid-sized capitalization companies may be less liquid, and the prices of such securities may fluctuate more and have a higher degree of volatility than those of larger, more established companies. Securities of small and mid capitalization companies may be traded in lower volume. The general market may not favor the small and mid-sized companies in which the Fund invests, and as a result the Fund could underperform the general market. Small and mid-sized companies may have more limited product lines, markets and financial resources that make them more susceptible to economic and market setbacks. Additionally, information about these companies may not be readily available. The smaller the company, the greater effect these risks may have on the company's operations and performance, which could have a significant impact on the price of the security. These factors could adversely affect the Fund's ability to sell such securities at a desirable time and price.

Swap Contracts Risk. The Fund may engage in interest rate, currency, and equity swaps and CDSs, and related instruments, which require Absolute or a Subadviser to forecast, among other things, interest rate movements, currency fluctuations, market values and the likelihood of credit event for a securities issuer. Such forecasting is inherently difficult and entails investment risk. The use of swaps involves investment techniques and risks different from those associated with ordinary portfolio security transactions. There is no guarantee that the Fund will be able to eliminate its exposure under an outstanding swap by entering into an offsetting swap, and the Fund may not assign a swap without the consent of the counterparty to it. In addition, each swap exposes the Fund to counterparty risk and Absolute or a Subadviser may determine to concentrate any or all of its swap transactions, including CDS, in a single counterparty or small group of counterparties. If a counterparty defaults, the Fund's only recourse will be to pursue contractual remedies against the counterparty and the Fund may be unsuccessful in such pursuit. The Fund thus assumes the risk that it may be delayed in or prevented from obtaining payments owed to it pursuant to a swap contract. In addition to counterparty risks, CDS are subject to credit risk on the underlying investment. If the Fund were the buyers of CDS and no event of default occurred, the Fund would lose its entire investment. Similarly, if the

ABSOLUTE STRATEGIES FUND

Fund were the seller of CDS and an event of default occurred, it would be required to pay its counterparty the value of the CDS, which may cause the Fund to incur a loss on the CDS transaction.

Technology Sector Risk. Investing in technology companies is particularly vulnerable to factors affecting the technology sector, such as dependency on consumer and business acceptance as new technology evolves, large and rapid price movements resulting from competition, rapid obsolescence of products and services and short product cycles. Many technology companies are small and at an earlier stage of development and, therefore, may be subject to risks such as those arising out of limited product lines, markets and financial and managerial resources. The value of a Fund's shares could experience significantly greater volatility than Funds investing more broadly.

Treasury Inflation Protected Securities Risk. TIPS are income-generating instruments whose interest and principal payments are adjusted for inflation. In certain interest rate environments, such as when real interest rates are rising faster than nominal interest rates, TIPS may experience greater losses than other fixed income securities with similar durations. The inflation adjustment, which is typically applied monthly to the bond's principal, follows a designated inflation index, such as the consumer price index (CPI). A fixed coupon rate is applied to the inflation adjusted principal so that as inflation rises, both the principal value and the interest payments increase. This adjustment can provide investors with a hedge against inflation, as it helps preserve the purchasing power of their investments. Because of this inflation adjustment feature, inflation protected bonds typically have lower yields than conventional fixed-rate bonds. TIPS are subject to certain risks, including interest rate risk and deflation risk. TIPS may also be divided into individual zero-coupon instruments for each coupon or principal payment (known as "iSTRIPS"). An iSTRIP of the principal component of a TIPS issue will retain the embedded inflation floor that will allow the holder of that security to receive the greater of the original principal or inflation adjusted principal value at maturity. iSTRIPS may be less liquid than conventional TIPS because they are a small component of the TIPS market.

Value Investment Risk. The determination that a stock is undervalued is subjective, the market may not agree and the stock's price may not rise to what the Adviser or Subadviser believes is its full value. The value of the Fund's shares may decline, even if stock prices generally are rising because value stocks may fall out of favor with the market or react differently to market, political and economic developments.

Non-Principal Investment Risks

Bank Loan Risk. The Fund may purchase secured and unsecured participations in loans and may purchase assignments of such loans made by banks or other financial intermediaries. When the Fund acquires loans through assignments, it may not be able to unilaterally enforce all rights and warrants under the loan with respect to any associated collateral. Payment of principal and interest depends upon the creditworthiness of the borrower, and the Fund may not receive scheduled principal or interest payments. The Fund may invest in loan participations of any credit quality, including "distressed" companies which carry a substantial risk of losing the entire amount invested. Certain loan participations may be illiquid. There is a risk that the value of any collateral securing a loan in which the Fund has an interest may decline and that the collateral may not be sufficient to cover the amount owed on the loan. In the event the borrower defaults, the Fund's access to the collateral may be limited or delayed by bankruptcy or other insolvency laws. Further, in the event of a default, second or lower lien secured loans, and unsecured loans, will generally be paid only if the value of the collateral exceeds the amount of the borrower's obligations to the senior secured lenders, and the remaining collateral may not be sufficient to cover the full amount owed on the loan in which the Fund has an interest. Under certain circumstances, bank loans may not be deemed to be securities under certain federal securities laws. Therefore, in the event of fraud or misrepresentation by a borrower or arranger, lenders and purchasers of interests in loans, such as the Fund, may not have the protection of the anti-fraud provisions of the federal securities laws as would otherwise be available for bonds or stocks. Instead, in such cases, parties

ABSOLUTE STRATEGIES FUND

generally would rely on the contractual provisions in the loan agreement itself and common law fraud protections under applicable state law.

Currency Risk. Because the Fund invests in securities that trade in, and receive revenues in, foreign currencies, or in derivatives that provide exposure to foreign currencies, the Fund will be subject to the risk that those currencies will decline in value relative to the U.S. dollar, or, in the case of hedging positions, that the U.S. dollar will decline in value relative to the currency being hedged. Currency rates in foreign countries may fluctuate significantly over short periods of time for a number of reasons, including changes in interest rates, intervention (or the failure to intervene) by U.S. or foreign governments, central banks or supranational entities such as the International Monetary Fund, or by the imposition of currency controls or other political developments in the U.S. or abroad. As a result, the Fund's investments in foreign currency-denominated securities may reduce the returns of the Fund. The value of foreign securities can change rapidly and unexpectedly. Suitable hedging instruments may not be available for all foreign currencies.

Distressed Investments Risk. The Fund's distressed debt strategy of investing in instruments involving loans, loan participations, bonds, notes, non-performing, sub-performing and sub-prime mortgage loans, many of which are not publicly traded, may involve a substantial degree of risk. In certain periods, there may be little or no liquidity in the markets for these instruments. The prices of such instruments may be extremely volatile. Valuing such instruments may be difficult, and the spread between the bid and asked prices of them may be greater than normally expected. If a Subadviser's evaluation of a distressed security should prove incorrect, the Fund may lose a substantial portion or all of its investment, or it may be required to accept cash or securities with a value less than the Fund's original investment. Moreover, because issuers of distressed securities are typically in a weak financial condition, the likelihood of default is high, in which case the Fund may lose its entire investment in such defaulted securities.

Emerging Markets Risk. Investing in emerging markets present greater risks than investing in foreign issuers in general. The risk of political or social upheaval is greater in emerging markets. Inflation and rapid fluctuations in inflation rates have had, and may continue to have, negative effects on the economies and markets of certain emerging market countries. A relative lack of information about companies in emerging markets may also exist. Securities traded on emerging markets are potentially illiquid and may be subject to volatility and high transaction costs.

Event-Driven and Special Situations Strategies Risk. Special situations and event-driven strategies are inherently speculative in nature. Any investment made pursuant to this strategy is subject to the risk of complete loss. Investments pursuant to special situations and event driven strategies require predictions about the likelihood of a corporate event and its impact on a company, which may be inaccurate. The anticipated event and/or impact of the event may never be realized and losses may result. A contemplated corporate transaction may never occur, may take more time than is expected or may result in the distribution of a new, less valuable security in place of the security (or derivative) purchased by the Fund. In addition, certain events, such as emergence from, or restructuring as a result of, bankruptcy, carry additional risks, and the securities of such companies may be more likely to lose value than the securities of more stable companies. It also may be difficult to obtain complete financial information about companies involved in certain situations and management of such companies may be addressing a situation with which it has little experience. If a transaction does not occur, the Fund may have to sell securities purchased pursuant to this strategy at a loss. The performance of these strategies may be expected to fluctuate from period to period; thus, the results generated by the strategy in one period will not necessarily be indicative of the results that may be expected from the strategy in future periods.

ABSOLUTE STRATEGIES FUND

High-Yield Securities Risk. Investments in “high-yield securities” or “junk bonds” are inherently speculative and have a greater risk of default than investments in investment grade fixed-income securities. Issuers of below-investment grade fixed-income securities are more likely to encounter and be materially affected by financial difficulties that may cause the issuer to default or otherwise become unable to pay interest or principal due on the security. Rising interest rates may compound such difficulties and reduce an issuer’s ability to repay principal and interest. If an issuer defaults, a below-investment grade fixed-income security could lose all of its value, be renegotiated at a lower interest rate or principal amount or become illiquid. Below-investment grade fixed-income securities may be less liquid and more volatile than investment grade fixed-income securities and may be more difficult to value or sell. Furthermore, securities rated below investment grade frequently have redemption features that permit an issuer to repurchase the security from the Fund before it matures. If the issuer redeems the bonds, the Fund may have to invest the proceeds in bonds with lower yields and may lose income.

Initial Public Offering Risk. Special risks associated with securities purchased in IPOs may include illiquidity and substantial price volatility due to unseasoned trading, lack of investor knowledge of the company, and limited operating history. The limited number of shares available for trading in some IPOs may make it more difficult for the Fund to buy or sell significant amounts of shares without an unfavorable impact on prevailing market prices. Some companies whose shares are sold through IPOs are involved in relatively new industries or lines of business, which may not be widely understood by investors. Some of these companies may be undercapitalized or regarded as developmental stage companies without revenues or operating income, or the near-term prospects of achieving them.

Mortgage-Related Securities Risk. Mortgage-related (and other asset-backed) securities represent interest in pools of mortgages (or other assets). Mortgage-Related Securities can have a fixed or adjustable interest rate. The Fund may also invest in debt securities that are issued by U.S. Government sponsored entities such as the Federal National Mortgage Association, the Federal Home Loan Mortgage Association, and the Federal Home Loan Banks. Investments in these securities involve credit risk as they are not backed by the full faith and credit of the U.S. Government. The Fund may invest in collateralized mortgage obligations (“CMOs”) or collateralized debt obligations (“CDOs”). CMOs and CDOs are each divided into classes, which are referred to as “tranches.” Certain such tranches have priority over other tranches. With respect to CMOs, each tranche’s priority is generally with respect to payment of principal. With respect to CDOs, each tranche’s priority is generally with respect to the payment of cash flows to investors, and no payment of principal will be made on any tranche until all other tranches with earlier stated maturity or distribution dates have been paid in full. The CDO investor’s interest in the cash flows of the investment, rather than in its underlying assets, differentiates the CDO from a CMO. The value of such securities may be affected by changes in interest rates, factors concerning the interests in and structure of the issuer or originator of the underlying assets, the creditworthiness of entities that provide supporting letters of credit or other credit enhancements and the market’s assessment of the underlying assets. Mortgage-Related Securities are subject to prepayment risk, which is the risk that issuers of such securities will prepay their debt when interest rates fall and cause the Fund to have to invest its assets in lower yielding investments. The risk of prepayment is difficult to predict and may result in volatility in the Fund.

Sovereign Debt Risk. A sovereign debtor’s willingness and ability to repay principal and interest on issued debt securities may depend on, among other things, its cash flow situation, cash reserves, foreign exchange rates, the size of the debt service burden on the issuer’s economy, its policy toward international lenders and political constraints. Sovereign debt risks are greater for emerging market issuers, and investors should be aware that certain emerging market countries are among the largest debtors to commercial banks and foreign governments. There is no legal process for collecting sovereign debt that a government does not pay nor are there bankruptcy proceedings through which all or part of the sovereign debt that a governmental entity has not repaid may be collected. Sovereign debt risk is increased for emerging market issuers. At times, certain emerging market countries have declared moratoria on

ABSOLUTE STRATEGIES FUND

the payment of principal and interest on foreign debt obligations. Such countries have experienced difficulty serving their sovereign debt on a timely basis, resulting in defaults and restructurings of their debt.

Subprime Mortgage Securities Risk. Investments in securities involving subprime mortgage loans (*i.e.*, loans to borrowers with lower credit scores), may be subject to certain risks associated with defaults on such loans. Originators and servicers of subprime mortgage loans may experience serious financial difficulties and enter bankruptcy proceedings. The inability of the originator to repurchase such mortgage loans in the event of early payment defaults and other loan representation breaches may also affect the performance of mortgage-backed securities backed by those subprime mortgage loans. In addition, the Fund may experience difficulty in the management and reinvestment of its investments subprime mortgage loans due to fluctuating interest rates and market volatility and the Fund may incur losses on such investments.

ABSOLUTE STRATEGIES FUND

Management

The Absolute Strategies Fund (the “Fund”) is a series of Forum Funds (the “Trust”), an open-end, management investment company (mutual fund). The Board of Trustees (the “Board”) oversees the management of the Fund and meets periodically to review the Fund’s performance, monitor investment activities and practices and discuss other matters affecting the Fund. Additional information regarding the Board and the Trust’s executive officers may be found in the Fund’s SAI, which is available from the Absolute’s website at www.absoluteadvisers.com.

The Adviser and Subadvisers

The Fund’s investment adviser is Absolute Investment Advisers LLC (the “Adviser”), 4 North Street, Suite 2, Hingham, MA 02043. The Adviser is a registered investment adviser under the Investment Advisers Act of 1940 and provides investment advisory services to the Fund. As of June 30, 2018, Absolute had over \$207 million of assets under management.

With respect to the Fund, the Adviser has claimed an exclusion from regulation with the Commodity Futures Trading Commission (“CFTC”) as a commodity pool operator (“CPO”) pursuant to CFTC Regulation 4.5 under the Commodity Exchange Act and is exempt from registration as a commodity trading adviser under CFTC Regulation 4.14(a)(8).

Subject to the general oversight of the Board, Absolute makes investment decisions for the Fund pursuant to an investment advisory agreement between the Adviser and the Trust, on behalf of the Fund (the “Advisory Agreement”). Absolute receives an advisory fee from the Fund at an annual rate equal to 1.60% of the Fund’s average annual daily net assets under the terms of the Advisory Agreement. Absolute pays any subadvisory fees out of the fees it receives pursuant to the Advisory Agreement. The aggregate amount paid by the Adviser to its Subadvisers for the fiscal year ended March 31, 2018 was 0.6692%. The actual advisory fee rate retained by the Adviser for the fiscal year ended March 31, 2018 was 1.45%. Absolute has contractually agreed to waive its fee and/or reimburse Fund expenses to limit the Fund’s Total Annual Fund Operating Expenses After Fee Waiver and/or Expense Reimbursement (excluding all taxes, interest, portfolio transaction expenses, dividend and interest expenses on short sales, acquired fund fees and expenses, proxy expenses and extraordinary expenses) to 1.99% through at least August 1, 2019 (“Expense Cap”). The Expense Cap may only be raised or eliminated with the consent of the Board of Trustees. The Adviser may be reimbursed by the Fund for fees waived and expenses reimbursed by the Adviser pursuant to the Expense Cap if such payment is made within three years of the fee waiver or expense reimbursement and does not cause the Total Annual Fund Operating Expenses After Fee Waiver and/or Expense Reimbursement of the Fund to exceed the lesser of (i) the then-current expense cap, and (ii) the expense cap in place at the time the fees/expenses were waived/reimbursed. Absolute waives its investment advisory fees for any Fund assets invested in pooled vehicles sponsored by it.

A discussion summarizing the basis on which the Board approved the Investment Advisory Agreement with Absolute and the Fund and the sub-advisory agreements between Absolute and the Subadvisers is included in the Fund’s annual report for the year ended March 31, 2018.

Subject to the general oversight of the Board, Absolute delegates the day-to-day management of the Fund to a combination of the following Subadvisers. Absolute retains overall supervisory responsibility for the general management and investment of the Fund’s assets.

ABSOLUTE STRATEGIES FUND

Subadviser	Investment Strategy
Harvest Capital Strategies LLC 600 Montgomery Street, Suite 1700 San Francisco, CA 94111	Agriculture Focused Long/Short Equity
St. James Investment Company, LLC 3838 Oak Lawn Avenue, Suite 1414 Dallas, TX 75219	Concentrated Equity
Tortoise Capital Advisors, L.L.C. 11550 Ash Street, Suite 300 Leawood, KS 66211	Select Energy Opportunity

Harvest Capital Strategies LLC was founded in 1999 and provides investment advisory services for other pooled investment vehicles and separately managed accounts.

St. James Investment Company, LLC was founded in 1999 and manages assets for institutional clients, high-net worth individuals and mutual funds.

Tortoise Capital Advisors, L.L.C was founded in 2002 and provides investment advisory services for separately managed accounts, private funds and other pooled investment vehicles.

Manager of Managers Structure

The Fund's Board and its shareholders have approved a "Manager of Managers" structure that permits the Adviser to appoint and replace Subadvisers and enter into, materially amend and terminate sub-advisory agreements with other investment managers with respect to the Fund, subject to Board approval but without shareholder approval (the "Manager Of Managers Structure").

The ability to implement the Manager Of Managers Structure with respect to the Fund is pursuant to an exemptive order from the SEC ("Exemptive Relief"). Pursuant to the Exemptive Relief, the Fund is required to notify shareholders of the retention of a new Subadviser within 90 days of the hiring of the new Subadviser. In the future, the Adviser may propose to appoint or replace one or more Subadvisers subject to Board approval and applicable shareholder notice requirements.

The Manager Of Managers Structure enables the Fund to operate with greater efficiency and without incurring the expense and delays associated with obtaining shareholder approval of such subadvisory agreements. Under the Manager Of Managers Structure, the Adviser maintains the ultimate responsibility, subject to the oversight of the Board, to oversee the Subadvisers and recommend their hiring and replacement. The Manager Of Managers Structure provides the Adviser with the discretion to terminate any Subadviser and allocate and reallocate the Fund's assets for management among The Manager Of Managers Structure does not permit investment management fees paid by the Fund to be increased without shareholder approval or change the Adviser's responsibilities to the Fund including responsibility for all advisory services furnished by a Subadviser.

ABSOLUTE STRATEGIES FUND

Portfolio Manager

Jay Compson Mr. Compson is the Portfolio Manager for the Fund and is responsible for Subadviser selection and overall portfolio construction, allocation, and monitoring of the Fund's assets. Mr. Compson has served as Portfolio Manager of the Fund since it commenced operations in July 2005.

Prior to founding Absolute in 2004, Mr. Compson was a Portfolio Manager and Partner at Abington Capital LP, a Boston-based hedge fund. He also spent several years in corporate risk management roles at two investment banks — Lehman Brothers and Tucker Anthony Sutro.

Mr. Compson received his BA degree from Franklin & Marshall College and his MBA in Finance and Management from New York University's Stern School of Business.

The SAI provides additional information about the compensation of the portfolio manager, other accounts managed by the portfolio manager and the ownership of Fund shares by the portfolio manager.

Other Service Providers

Atlantic Fund Administration, LLC (d/b/a Atlantic Fund Services) ("Atlantic") provides fund accounting, fund administration, and compliance services to the Fund and the Trust and supplies certain officers of the Trust, including a Principal Executive Officer, a Principal Financial Officer, a Chief Compliance Officer, an Anti-Money Laundering Compliance Officer and additional compliance support personnel. Atlantic Shareholder Services, LLC, a wholly-owned subsidiary of Atlantic, provides transfer agency services to the Fund and the Trust.

Foreside Fund Services, LLC (the "Distributor"), the Trust's principal underwriter, acts as the Trust's distributor in connection with the offering of Fund shares. The Distributor may enter into arrangements with banks, broker-dealers and other financial intermediaries through which investors may purchase or redeem shares. The Distributor is not affiliated with Absolute or with Atlantic or their affiliates.

Fund Expenses

The Fund is charged for those expenses that are directly attributable to it, while other expenses are allocated proportionately among the Fund and other series of the Trust based upon methods approved by the Board. Expenses that are directly attributable to a specific class of shares, such as distribution fees and shareholder servicing fees, are charged directly to that class. Absolute or other service providers may waive all or any portion of their fees and may reimburse certain expenses of the Fund. Service provider waivers may be different in dollar and percentage amount for different classes of the Fund, as applicable, may be voluntary, and do not affect Absolute's contractual waiver. Any agreement to waive fees or to reimburse expenses increases the investment performance of the applicable Fund and its share classes for the period during which the waiver or reimbursement is in effect. Current Adviser fee waiver and/or expense reimbursements are reflected in the section titled "Fees and Expenses."

Information Regarding Dividend and Interest Expenses on Short Sales

Dividend and interest expenses on short sales occur when the Fund sells an equity or debt security short to gain the inverse exposure necessary to meet its investment objective. When the Fund sells a security short, the Fund borrows the security from a lender and then sells the security in the general market. The Fund is obligated to pay an amount equivalent to any dividend declared or interest paid during the duration of the short position to the lender from which

ABSOLUTE STRATEGIES FUND

the Fund borrowed the security and the Fund is obligated to record the payment as an expense. The Fund may also be obligated to pay fees in connection with a short sale. Also, the dividend and interest expenses on short sales are typically offset, in their entirety or in part, by the income derived from earnings on the cash proceeds of the short sales. Nevertheless, the Fund will bear the cost of the dividend and interest expenses on short sales. The Fund is also required to pay any applicable interest on a borrowed security and borrowings related to short sales.

The table below illustrates the Fund's "Total Annual Fund Operating Expenses with Dividend and Interest Expenses on Short Sales" and "Total Annual Fund Operating Expenses without Dividend and Interest Expenses on Short Sales." The Fund's total annual operating expenses (expenses that are deducted from Fund assets) were:

Comparison of Expenses	Institutional Shares
Management Fees	1.60%
Distribution and/or Service (12b-1) Fees	None
Other Expenses	
Other Expenses	0.54%
Dividend and Interest Expenses on Short Sales	0.82%
Total Other Expenses	1.36%
Acquired Fund Fees and Expenses	0.27%
Total Annual Fund Operating Expenses with Dividend and Interest Expenses on Short Sales	3.23%
Less Dividend and Interest Expenses on Short Sales	(0.82%)
Total Annual Fund Operating Expenses without Dividend and Interest Expenses on Short Sales	2.41%
Fee Waiver and/or Expense Reimbursement	(0.15%)
Total Annual Fund Operating Expenses After Fee Waiver and/or Expense Reimbursement without Dividend and Interest Expenses on Short Sales ⁽¹⁾	2.26%

⁽¹⁾ Total Annual Fund Operating Expenses do not correlate to the ratio of expenses to average net assets given in the financial highlights due to a reduction in the expense cap for the Fund and because they do not include Acquired Fund Fees and Expenses ("AFFE").

General Information

You may purchase or sell (redeem) shares of the Fund on any day that the NYSE is open for business. Notwithstanding this fact, the Fund may, only in the case of an emergency, calculate its NAV and accept and process shareholder orders when the NYSE is closed.

You may purchase or sell shares of the Fund at the next NAV calculated (normally 4:00 p.m., Eastern Time) after the transfer agent or your approved broker-dealer or other financial intermediary receives your request in good order. "Good order" means that you have provided sufficient information necessary to process your request as outlined in this Prospectus, including any required signatures, documents, payment and Medallion Signature Guarantees. All requests to purchase or sell Fund shares received in good order prior to the Fund's close will receive that day's NAV. Requests received in good order after the Fund's close or on a day when the Fund does not value its shares will be processed on the next business day and will be priced at the next NAV. The Fund cannot accept orders that request a particular day or price for the transaction or any other special conditions.

Shares of the Fund will only be issued against full payment, as described more fully in this Prospectus and the SAI. The Fund does not issue share certificates.

If you purchase shares directly from the Fund, you will receive a confirmation of each transaction and quarterly statements detailing Fund balances and all transactions completed during the prior quarter. Automatic reinvestments of distributions and systematic investments and withdrawals may be confirmed only by quarterly statement. You should verify the accuracy of all transactions in your account as soon as you receive your confirmations and quarterly statements.

The Fund may temporarily suspend or discontinue any service or privilege, including systematic investments and withdrawals, wire redemption privileges and telephone or internet redemption privileges, if applicable. The Fund reserves the right to refuse any purchase request, including, but not limited to, requests that could adversely affect the Fund or its operations. If the Fund were to refuse any purchase request, it would notify the purchaser within two business days of receiving a purchase request in good order.

Certain states, including the State of Texas, have laws that allow shareholders to designate a representative to receive abandoned or unclaimed property ("escheatment") notifications by completing and submitting a designation form that generally can be found on the official state website. If a shareholder resides in an applicable state, and elects to designate a representative to receive escheatment notifications, escheatment notices generally will be delivered as required by such state laws, including, as applicable, to both the shareholder and the designated representative. A completed designation form may be mailed to the Fund (if Shares are held directly with the Fund) or to the shareholder's financial intermediary (if Shares are not held directly with the Fund). Shareholders should refer to relevant state law for the shareholder's specific rights and responsibilities under his or her state's escheatment law(s), which can generally be found on a state's official website.

ABSOLUTE STRATEGIES FUND

NAV Determination. The NAV of the Fund is determined by taking the value of the assets of the Fund, subtracting the value of the liabilities of the Fund and then dividing the result (net assets) by the number of outstanding shares of the Fund. The Fund calculates its NAV as of the close of trading on the NYSE (generally 4:00 p.m., Eastern Time). The NYSE is open every weekday other than NYSE holidays and early closings, which are published at www.nyse.com and subject to change without notice.

The Fund values securities at current market value, where market quotations are available, using the last reported sales price or the official closing price, as provided by independent pricing services. In the absence of sales, securities are valued at the mean of the last bid and asked prices. Non-exchange traded investment companies are valued at their NAVs. Certain short-term securities may be valued at amortized cost.

To the extent that the Fund's portfolio investments trade in markets on days when the Fund is not open for business, the value of the Fund's assets may vary on those days. In addition, trading in certain portfolio investments may not occur on days when the Fund is open for business, as markets or exchanges other than the NYSE may be closed.

Futures contracts are valued at that day's last reported settlement price on the exchange where the contract is traded.

Fixed-income securities may be valued at prices supplied by the Fund's pricing agent based on broker-supplied or dealer-supplied valuations or on matrix pricing, a method of valuing securities by reference to the value of other securities with similar characteristics, such as rating, interest rate and maturity.

Forward currency contracts are valued at the mean of bid and ask prices interpolated from rates for proximate time periods, as provided by an independent pricing service.

The Board has delegated day-to-day responsibility for fair valuation determinations in accordance with these procedures to a Valuation Committee. The Valuation Committee makes such determinations under the supervision of the Board. Fair valuation may be based on subjective factors. As a result, the fair value price of a security may differ from that security's market price and may not be the price at which the security may be sold. Fair valuation could result in a different NAV than a NAV determined by using market quotations.

Although the Fund generally prices its foreign securities using their closing prices from the foreign markets where they trade (typically prior to the Fund's calculation of its NAV), these prices may be affected by events that occur after the close of the foreign market but before the Fund prices its shares. As a result, the Fund's investments in foreign securities are more likely to require a fair value determination than investments in domestic securities. In determining fair value prices of foreign securities, the Fund may consider the performance of securities on their primary exchanges, foreign currency appreciation or depreciation, securities market movements in the U.S. and other relevant information as related to the securities.

Securities of smaller companies are more likely to require a fair value determination because they may be thinly traded and less liquid than securities of larger companies.

Transactions Through Financial Intermediaries. The Fund has authorized certain financial services companies, broker-dealers, banks and other agents, including the designees of such entities (collectively, "financial intermediaries"), to accept purchase and redemption orders on the Fund's behalf. If you invest through a financial intermediary, the policies and fees of the financial intermediary may be different from the policies and fees you would be subject to if you had invested directly in the Fund. Among other things, financial intermediaries may charge transaction fees and

ABSOLUTE STRATEGIES FUND

may set different minimum investment restrictions or limitations on buying or selling Fund shares. You should consult your broker or another representative of your financial intermediary for more information.

The Fund will be deemed to have received a purchase or redemption order when a financial intermediary that is an agent of the Fund for the purpose of accepting orders receives the order. All orders to purchase or sell shares are processed as of the next NAV calculated after the order has been received in good order by a financial intermediary. Orders are accepted until the close of trading on the NYSE every business day (normally 4:00 p.m., Eastern Time) and are processed, including by financial intermediaries, at that day's NAV.

Payments to Financial Intermediaries. The Fund, at its own expense, may pay additional compensation to financial intermediaries for shareholder-related services, including administrative, recordkeeping and shareholder communication services. In addition, pursuant to any applicable Rule 12b-1 plan, the Fund may pay compensation to financial intermediaries for distribution-related services. For example, compensation may be paid to make Fund shares available to sales representatives and/or customers of a fund supermarket platform or a similar program sponsor or for services provided in connection with such fund supermarket platforms and programs. To the extent that the Fund pays all or a portion of such compensation, the payment is designed to compensate the financial intermediary for distribution activities or for providing services that would otherwise be provided by the Fund's transfer agent and/or administrator.

Absolute or another Fund affiliate, out of its own resources and not as an expense of the Fund, may provide additional compensation to financial intermediaries. Such compensation is sometimes referred to as "revenue sharing." Compensation received by a financial intermediary from Absolute or another Fund affiliate may include payments for shareholder servicing, marketing and/or training expenses incurred by the financial intermediary, including expenses incurred by the financial intermediary in educating its salespersons with respect to Fund shares. For example, such compensation may include reimbursements for expenses incurred in attending educational seminars regarding the Fund, including travel and lodging expenses. It may also cover costs incurred by financial intermediaries in connection with their efforts to sell Fund shares, including costs incurred in compensating registered sales representatives and preparing, printing and distributing sales literature.

The amount of compensation paid to different financial intermediaries may vary. The compensation paid to a financial intermediary may be based on a variety of factors, including average assets under management in accounts distributed and/or serviced by the financial intermediary, gross sales by the financial intermediary and/or the number of accounts serviced by the financial intermediary that invest in the Fund.

Any compensation received by a financial intermediary, whether from the Fund, the Adviser or another affiliate, and the prospect of receiving such compensation, may provide the financial intermediary with an incentive to recommend the shares of the Fund, or a certain class of shares of the Fund, over other potential investments. Similarly, the compensation may cause financial intermediaries to elevate the prominence of the Fund within its organization by, for example, placing it on a list of preferred funds.

Anti-Money Laundering Program. Customer identification and verification are part of the Fund's overall obligation to deter money laundering under federal law. The Trust's Anti-Money Laundering Program is designed to prevent the Fund from being used for money laundering or the financing of terrorist activities. In this regard, the Fund reserves the right, to the extent permitted by law, (1) to refuse, cancel or rescind any purchase order or (2) to freeze any account and/or suspend account services. These actions will be taken when, at the sole discretion of Trust management, they are deemed to be in the best interest of the Fund or in cases when the Fund is requested or compelled to do so by governmental or law enforcement authorities or applicable law. If your account is closed at the request of

ABSOLUTE STRATEGIES FUND

governmental or law enforcement authorities, you may not receive proceeds of the redemption if the Fund is required to withhold such proceeds.

Disclosure of Portfolio Holdings. A description of the Fund's policies and procedures with respect to the disclosure of portfolio securities is available in the Fund's SAI.

Buying Shares

How to Make Payments. Unless purchased through a financial intermediary, all investments must be made by check, Automated Clearing House ("ACH") or wire. All checks must be payable in U.S. dollars and drawn on U.S. financial institutions. In the absence of the granting of an exception consistent with the Trust's Anti-Money Laundering Program, the Fund does not accept purchases made by credit card check, starter check, checks with more than one endorsement (unless the check is payable to all endorsees), cash or cash equivalents (for instance, you may not pay by money order, cashier's check, bank draft or traveler's check). The Fund and the Adviser also reserve the right to accept in kind contributions of securities in exchange for shares of the Fund.

Checks. Checks must be made payable to "Absolute Strategies Fund." For individual, sole proprietorship, joint, Uniform Gifts to Minors Act ("UGMA") and Uniform Transfers to Minors Act ("UTMA") accounts, checks may be made payable to one or more owners of the account and endorsed to "Absolute Strategies Fund." A \$20 charge may be imposed on any returned checks.

ACH. The Automated Clearing House system maintained by the Federal Reserve Bank allows banks to process checks, transfer funds and perform other tasks. Your U.S. financial institution may charge you a fee for this service.

Wires. You may instruct the U.S. financial institution with which you have an account to make a federal funds wire payment to the Fund. Your U.S. financial institution may charge you a fee for this service.

Minimum Investments. The Fund accepts investments in the following minimum amounts:

	Minimum Initial Investment ⁽¹⁾⁽²⁾	Minimum Additional Investment ⁽¹⁾⁽²⁾
Standard Accounts	\$25,000	None
Retirement Accounts	\$25,000	None

⁽¹⁾ If you invest through a broker or other financial intermediary, the policies and fees of the intermediary may be different than the policies and fees of the Fund. Among other things, such financial intermediaries may charge transaction fees and may set different minimum investments or limitations on buying (selling) Fund shares. You should consult your broker or other representative of your financial intermediary for more information.

⁽²⁾ No initial or subsequent investment minimums for accounts maintained by financial institutions for the benefit of their clients who purchase shares through investment programs such as (1) fee-based advisory programs; (2) employee benefit plans like 401(k) retirement plans; (3) mutual fund platforms; and (4) consulting firms. No initial or subsequent investment minimum for Trustees or officers of the Trust, directors, officers and employees of Absolute, employees of the Subadvisers, and employees and affiliates of the Fund, or the distributor or any of their affiliates, or the spouse, sibling, direct ancestor, or direct descendent (collectively, "relatives") of any such person, any trust or individual retirement account or self-employed retirement plan for the benefit of any such person or relative; or the estate of any such person or relative.

ABSOLUTE STRATEGIES FUND

The Fund reserves the right to waive minimum investment amounts, if deemed appropriate by an officer of the Trust.

Registered investment advisers and financial planners may be permitted to aggregate the value of accounts in order to meet minimum investment amounts.

Account Requirements. The following table describes the requirements to establish certain types of accounts in the Fund.

Type of Account	Requirement
Individual, Sole Proprietorship and Joint Accounts <ul style="list-style-type: none">Individual accounts and sole proprietorship accounts are owned by one person. Joint accounts have two or more owners (tenants).	<ul style="list-style-type: none">Instructions must be signed by all persons named as account owners exactly as their names appear on the account.
Gifts or Transfers to a Minor (UGMA, UTMA) <ul style="list-style-type: none">These custodial accounts are owned by a minor child but controlled by an adult custodian.	<ul style="list-style-type: none">Depending on state laws, you may set up a custodial account under the UGMA or the UTMA.The custodian must sign instructions in a manner indicating custodial capacity.
Corporations/Other Entities <ul style="list-style-type: none">These accounts are owned by the entity, but control is exercised by its officers, partners or other management.	<ul style="list-style-type: none">The entity should submit a certified copy of its articles of incorporation (or a government-issued business license or other document that reflects the existence of the entity) and a corporate resolution or a secretary's certificate.
Trusts <ul style="list-style-type: none">These accounts are controlled by a trustee as a way to convey and control assets for the benefit of a third-party owner.	<ul style="list-style-type: none">The trust must be established before an account may be opened.The trust should provide the first and signature pages from the trust document identifying the trustees.

Account Application and Customer Identity Verification. To help the government fight the funding of terrorism and money laundering activities, federal law requires financial institutions to obtain, verify and record information that identifies each person who opens an account.

When you open an account, the Fund will ask for your first and last name, U.S. taxpayer identification number ("TIN"), physical street address, date of birth and other information or documents that will allow the Fund to identify you. If you do not supply the required information, the Fund will attempt to contact you or, if applicable, your financial adviser. If the Fund cannot obtain the required information within a timeframe established in its sole discretion, your application will be rejected.

When your application is in good order and includes all required information, your order will normally be processed at the NAV next calculated after receipt of your application and investment amount. The Fund will attempt to verify your identity using the information that you have supplied and other information about you that is available from third parties, including information available in public and private databases, such as consumer reports from credit reporting agencies.

The Fund will try to verify your identity within a timeframe established in its sole discretion. If the Fund cannot do so, the Fund reserves the right to redeem your investment at the next NAV calculated after the Fund decides to close

ABSOLUTE STRATEGIES FUND

your account. If your account is closed, you may realize a gain or loss on the Fund shares in the account. You will be responsible for any related taxes and will not be able to recoup any redemption fees assessed, if applicable.

Policy on Prohibition of Foreign Shareholders. The Fund requires that all shareholders be U.S. persons or U.S. resident aliens with a valid TIN (or show proof of having applied for a TIN and commit to provide a valid TIN within 60 days) in order to open an account with the Fund.

Investment Procedures. The following table describes the procedures for investing in the Fund.

The transfer agent will electronically debit your purchase proceeds from the U.S. financial institution account identified on your account application. ACH purchases are limited to \$25,000 per day.

ABSOLUTE STRATEGIES FUND

Systematic Investments. You may establish a systematic investment plan to automatically invest a specific amount of money (up to \$25,000 per day) into your account on a specified day and frequency not to exceed two investments per month. Payments for systematic investments are automatically debited from your designated savings or checking account via ACH. Systematic investments must be for at least \$100 per occurrence. If you wish to enroll in a systematic investment plan, complete the appropriate section on the account application. Your signed account application must be received at least three business days prior to the initial transaction. The Fund may terminate or modify this privilege at any time. You may terminate your participation in a systematic investment plan by notifying the Fund at least two days in advance of the next withdrawal.

A systematic investment plan is a method of using dollar cost averaging as an investment strategy that involves investing a fixed amount of money at regular time intervals. However, a program of regular investment cannot ensure a profit or protect against a loss as a result of declining markets. By continually investing the same amount, you will be purchasing more shares when the price is lower and fewer shares when the price is higher. Please call (888) 99-ABSOLUTE or (888) 992-2765 (toll free) for additional information regarding systematic investment plans.

Frequent Trading. Frequent trading by a Fund shareholder may pose risks to other shareholders in the Fund, including (1) the dilution of the Fund's NAV, (2) an increase in the Fund's expenses, and (3) interference with the portfolio manager's ability to execute efficient investment strategies. Because of the Fund's low volatility and numerous portfolio holdings Absolute believes that the Fund's portfolio generally will not be attractive to frequent traders or susceptible to market timing. Accordingly, the Board has not adopted a policy to monitor for frequent purchases and redemptions of Fund shares.

Canceled or Failed Payments. The Fund accepts checks and ACH payments at full value subject to collection. If the Fund does not receive your payment for shares or you pay with a check or ACH payment that does not clear, your purchase will be canceled within two business days of notification from your bank that your funds did not clear. You will be responsible for any actual losses and expenses incurred by the Fund or the transfer agent. The Fund and its agents have the right to reject or cancel any purchase request due to non-payment.

Selling Shares

Redemption orders received in good order will be processed at the next calculated NAV. The Fund typically expects to pay shareholder redemption requests, including during stressed market conditions, within one business day of receipt of the request in good order, and may seek to meet such redemption requests through one or more of the following methods: sales of portfolio assets, use of cash or cash equivalents held in the Fund's portfolio, and/or redemptions in-kind, as permitted by applicable rules and regulations. The right of redemption may not be suspended for more than seven days after the tender of Fund shares, except for any period during which (1) the NYSE is closed (other than customary weekend and holiday closings) or the Securities and Exchange Commission (the "SEC") determines that trading thereon is restricted, (2) an emergency (as determined by the SEC) exists as a result of which disposal by the Fund of its securities is not reasonably practicable or as a result of which it is not reasonably practicable for the Fund to determine fairly the value of its net assets, or (3) the SEC has entered a suspension order for the protection of the shareholders of the Fund.

The Fund will not issue shares until payment is received. If redemption is sought for shares for which payment has not been received, the Fund will delay sending redemption proceeds until payment is received, which may be up to 15 calendar days.

ABSOLUTE STRATEGIES FUND

How to Sell Shares from Your Account

Through a Financial Intermediary

- If you purchased shares through your financial intermediary, your redemption order must be placed through the same financial intermediary.

By Mail

- Prepare a written request including:
 - your name(s) and signature(s);
 - your account number;
 - the Fund name and class;
 - the dollar amount or number of shares you want to sell;
 - how and where to send the redemption proceeds;
 - a Medallion Signature Guarantee (if required); and
 - other documentation (if required).
- Mail the Fund your request and documentation.

By Telephone

- Call the Fund with your request, unless you declined telephone redemption privileges on your account application.
- Provide the following information:
 - your account number;
 - the exact name(s) in which the account is registered; and
 - an additional form of identification.
- Redemption proceeds will be mailed to you by check or electronically credited to your account at the U.S. financial institution identified on your account application.

By Systematic Withdrawal

- Complete the systematic withdrawal section of the application.
- Attach a voided check to your application.
- Mail the completed application to the Fund.
- Redemption proceeds will be mailed to you by check or electronically credited to your account at the U.S. financial institution identified on your account application.

Wire Redemption Privileges. You may redeem your shares with proceeds payable by wire unless you declined wire redemption privileges on your account application. The minimum amount that may be redeemed by wire is \$5,000.

Telephone Redemption Privileges. You may redeem your shares by telephone, unless you declined telephone redemption privileges on your account application. You may be responsible for an unauthorized telephone redemption order as long as the transfer agent takes reasonable measures to verify that the order is genuine. Telephone redemption orders may be difficult to complete during periods of significant economic or market activity. If you are not able to reach the Fund by telephone, you may mail us your redemption order.

Systematic Withdrawals. You may establish a systematic withdrawal plan to automatically redeem a specific amount of money or shares from your account on a specified day and frequency not to exceed one withdrawal per month. Payments for systematic withdrawals are sent by check to your address of record, or if you so designate, to your bank account by ACH payment. To establish a systematic withdrawal plan, complete the systematic withdrawal section of the account application. The plan may be terminated or modified by a shareholder or the Fund at any time without charge or penalty. You may terminate your participation in a systematic withdrawal plan at any time by contacting the Fund sufficiently in advance of the next withdrawal, which generally means up to 4:00 p.m. Eastern Time, on the date

ABSOLUTE STRATEGIES FUND

of the scheduled withdrawal if notified by phone, or two business days in advance of the withdrawal date if notified in writing.

A withdrawal under a systematic withdrawal plan involves a redemption of Fund shares and may result in a gain or loss for federal income tax purposes. Please call (888) 99-ABSOLUTE or (888) 992-2765 (toll free) for additional information regarding systematic withdrawal plans.

Signature Guarantee Requirements. To protect you and the Fund against fraud, signatures on certain requests must have a Medallion Signature Guarantee. A Medallion Signature Guarantee verifies the authenticity of your signature. You may obtain a Medallion Signature Guarantee from most banking institutions or securities brokers but not from a notary public. Written instructions signed by all registered shareholders with a Medallion Signature Guarantee for each shareholder are required for any of the following:

- written requests to redeem \$100,000 or more;
- changes to a shareholder's record name or account registration;
- paying redemption proceeds from an account for which the address has changed within the last 30 days;
- sending redemption and distribution proceeds to any person, address or financial institution account not on record;
- sending redemption and distribution proceeds to an account with a different registration (name or ownership) from your account; and
- adding or changing ACH or wire instructions, the telephone redemption or any other election in connection with your account.

The Fund reserves the right to require Medallion Signature Guarantees on all redemptions.

Small Account Balances. If the value of your account falls below the minimum account balances in the following table, the Fund may ask you to increase your balance. If the account value is still below the minimum balance after 60 days, the Fund may close your account and send you the proceeds. The Fund will not close your account if it falls below these amounts solely as a result of Fund performance.

	Minimum Account Balance
Standard Accounts	\$5,000
Retirement Accounts	\$5,000

Redemptions in Kind. Redemption proceeds normally are paid in cash. If deemed appropriate and advisable by the Adviser, the Fund may satisfy a redemption request from a shareholder by distributing portfolio securities pursuant to procedures adopted by the Board. Pursuant to an election filed with the SEC, under certain circumstances, the Fund may pay redemption proceeds in portfolio securities rather than in cash. If the Fund redeems shares in this manner, the shareholder assumes the risk of a subsequent change in the market value of those securities, the costs of liquidating the securities (such as brokerage costs) and the possibility of a lack of a liquid market for those securities. In-kind redemptions may take the form of a pro rata portion of the Fund's portfolio, individual securities, or a representative basket of securities. Please see the SAI for more details on redemptions in kind.

ABSOLUTE STRATEGIES FUND

Lost Accounts. The transfer agent will consider your account lost if correspondence to your address of record is returned as undeliverable on two consecutive occasions, unless the transfer agent determines your new address. When an account is lost, all distributions on the account will be reinvested in additional shares of the Fund. In addition, the amount of any outstanding check (unpaid for six months or more) and checks that have been returned to the transfer agent may be reinvested at the current NAV, and the checks will be canceled. However, checks will not be reinvested into accounts with a zero balance but will be held in a different account. Any of your unclaimed property may be transferred to the state of your last known address if no activity occurs in your account within the time period specified by that state's law.

Retirement Accounts

You may invest in shares of the Fund through an IRA, including traditional and Roth IRAs, also known as a "Qualified Retirement Account." The Fund may also be appropriate for other retirement plans, such as 401(k) plans. Before investing in an IRA or other retirement account, you should consult your tax advisor. Whenever making an investment in an IRA or certain retirement plans, be sure to indicate the year to which the contribution is attributed.

ABSOLUTE STRATEGIES FUND

Other Information

Distributions and Reinvestments. The Fund declares dividends from net investment income and pays them semi-annually. Any net capital gains and net foreign currency gains realized by the Fund are distributed at least annually.

Most investors typically have their income dividends and other distributions (each, a “distribution”) paid by the Fund reinvested in additional shares of the class of the Fund. If you choose this option, or if you do not indicate any choice, your distributions will be reinvested. Alternatively, you may choose to have your distributions of \$10 or more sent directly to your bank account or paid to you by check. However, if a distribution is less than \$10, your proceeds will be reinvested. If five or more of your distribution checks remain uncashed after 180 days, all subsequent distributions may be reinvested. For federal income tax purposes, distributions to shareholders other than qualified retirement plans and accounts and other tax-exempt investors are treated the same whether they are received in cash or reinvested.

Taxes. The Fund intends to operate in a manner such that it will continue to qualify for treatment as a regulated investment company under Subchapter M of Chapter 1, Subtitle A, of the Internal Revenue Code of 1986, as amended, and will not be liable for federal income or excise taxes.

The Fund’s distributions of net investment income and the excess of net short-term capital gain over net long-term capital loss are taxable to you as ordinary income, except as noted below. The Fund’s distributions of net capital gain (that is, the excess of net long-term capital gain over net short-term capital loss), if any, are taxable to you as long-term capital gain, regardless of how long you have held your shares. Distributions may also be subject to state and local income taxes. Some Fund distributions may also include nontaxable returns of capital, which reduce your tax basis in your Fund shares and are treated as gain from the sale of the shares to the extent they exceed your basis.

The Fund’s dividends attributable to its “qualified dividend income” (*i.e.*, dividends received on stock of most domestic and certain foreign corporations with respect to which the Fund satisfies certain holding period and other restrictions) generally will be subject to federal income tax for individual and certain other non-corporate shareholders (each, an “individual shareholder”) who satisfy those restrictions with respect to their Fund shares at the rates for net capital gain – a maximum of 15% for individual shareholders with taxable income not exceeding certain thresholds and 20% for individual shareholders with taxable income exceeding the thresholds, which will be adjusted for inflation annually. A portion of the Fund’s dividends also may be eligible for the dividends-received deduction allowed to corporations; the eligible portion may not exceed the aggregate dividends the Fund receives from domestic corporations subject to federal income tax (thus excluding, among others, real estate investment trusts) and excludes dividends from foreign corporations, subject to similar restrictions. However, dividends a corporate shareholder deducts pursuant to that deduction are subject indirectly to the federal alternative minimum tax. Tax laws and rates may change over time. Please consult a tax professional for more information.

Generally, Fund distributions are taxable to you in the year you receive them. However, any distributions that are declared in October, November or December to shareholders of record in such a month but paid in January generally are taxable as if received on December 31.

A distribution reduces the NAV of the Fund’s shares by the amount of the distribution. If you purchase shares prior to a distribution, you are taxed on the full amount of the distribution even though it represents a partial return of your investment.

ABSOLUTE STRATEGIES FUND

A sale (redemption) of Fund shares is a taxable event for federal income tax purposes. You will recognize a gain or loss on the transaction equal to the difference, if any, between the amount of your net redemption proceeds and your tax basis in the redeemed Fund shares. The gain or loss will be capital gain or loss if you held the Fund shares as capital assets. Any capital gain or loss will be treated as long-term capital gain or loss if you held the Fund shares for more than one year at the time of the redemption, and any such gain will be taxed to individual shareholders at the 15% or 20% maximum federal income tax rates mentioned above. Any capital loss arising from a redemption of Fund shares held for six months or less, however, will be treated as long-term capital loss to the extent of the amount of net capital gain distributions received with respect to those shares.

Withholding Tax. If an individual shareholder fails to certify that the TIN furnished to the Fund is correct or furnishes an incorrect number, the Fund must withhold and remit to the U.S. Treasury Department 28% of dividends, capital gain distributions, and redemption proceeds (regardless of whether the shareholder realizes a gain or loss) otherwise payable to the shareholder (together with the withholding described in the next sentence, “backup withholding”). Withholding at that rate also is required from the Fund’s dividends and capital gain distributions otherwise payable to such a shareholder who is subject to backup withholding for any other reason. Backup withholding is not an additional tax, and any amounts so withheld may be credited against a shareholder’s federal income tax liability or refunded.

A Fund shareholder who wants to use the average basis method for determining basis in Fund shares that he or she acquired or acquires after December 31, 2011 (“Covered Shares”) must elect to do so in writing (which may be electronic). If a Fund shareholder fails to affirmatively elect the average basis method, the basis determination will be made in accordance with the Fund’s default method, which is first-in first-out. If, however, a Fund shareholder wishes to use a different method accepted by the Internal Revenue Service (“IRS”) for basis determination (e.g., a specific identification method), the shareholder may elect to do so. The basis determination method that a Fund shareholder elects may not be changed with respect to a redemption (including a redemption that is part of an exchange) of Covered Shares after the settlement date of the redemption.

In addition to the requirement to report the gross proceeds from a redemption of shares, the Fund (or its administrative agent) must report to the IRS and furnish to its shareholders the basis information for Covered Shares and indicate whether they had a short-term (one year or less) or long-term (more than one year) holding period. Fund shareholders should consult with their tax advisors to determine the best IRS-accepted basis determination method for their tax situation and to obtain more information about how the basis reporting law applies to them.

An individual shareholder whose “modified adjusted gross income” exceeds a threshold amount (\$250,000 for married persons filing jointly and \$200,000 for single taxpayers) (“Excess”) is required to pay a 3.8% federal tax on the lesser of (1) the Excess or (2) the individual shareholder’s “net investment income,” which generally includes dividends, interest, and net gains from the disposition of investment property (including distributions the Fund pays and net gains realized on a redemption of Fund shares). This tax is in addition to any other taxes due on that income. Shareholders should consult their own tax advisors regarding the effect, if any, this provision may have on their investment in Fund shares.

After December 31 of each year, the Fund will mail to its shareholders reports containing information about the federal income tax status of distributions paid during the year. For further information about the tax effects of investing in the Fund, please see the SAI and consult your tax advisor.

Organization. The Trust is a Delaware statutory trust, and the Fund is a series thereof. The Fund does not expect to hold shareholders’ meetings unless required by federal or Delaware law. Shareholders of each series of the Trust are

ABSOLUTE STRATEGIES FUND

entitled to vote at shareholders' meetings unless a matter relates only to a specific series (such as the approval of an advisory agreement for the Fund). From time to time, large shareholders may control the Fund or the Trust.

Additional Information. The Trust enters into contractual arrangements with various parties, including, among others, the Fund's Adviser, Subadviser(s) (if applicable), custodian, principal underwriter and transfer agent who provide services to the Fund. Shareholders are not parties to any such contractual arrangements or intended beneficiaries of those contractual arrangements, and those contractual arrangements are not intended to create in any shareholder any right to enforce them against the service providers or to seek any remedy under them against the service providers, either directly or on behalf of the Trust.

This Prospectus provides information concerning the Fund that you should consider in determining whether to purchase Fund shares. Neither this Prospectus, the SAI nor any other communication to shareholders is intended, or should be read, to be or give rise to an agreement or contract between the Trust, its trustees or any series of the Trust, including the Fund, and any investor, or to give rise to any rights in any shareholder or other person other than any rights under federal or state law that may not be waived.

ABSOLUTE STRATEGIES FUND

Financial Highlights

The financial highlights table is intended to help you understand the Fund's financial performance for the past five years. Certain information reflects financial results for a single Fund share. The total returns in the table represent the rate that an investor would have earned or lost on an investment in the Fund, assuming reinvestment of all dividends and distributions.

This information has been audited by BBD, LLP, an independent registered public accounting firm, whose report, along with the Fund's financial statements, are included in the annual report dated March 31, 2018, which is available upon request.

	For the Years Ended March 31,

FACTS

WHAT DOES THE ABSOLUTE STRATEGIES FUND DO WITH YOUR PERSONAL INFORMATION?

Why?	Financial companies choose how they share your personal information. Federal law gives consumers the right to limit some but not all sharing. Federal law also requires us to tell you how we collect, share, and protect your personal information. Please read this notice carefully to understand what we do.
-------------	--

What?	<p>The types of personal information we collect and share depend on the product or service you have with us. This information can include:</p> <ul style="list-style-type: none"> • Social Security number and • Account balances and • Account transactions and • Checking account information and • Retirement assets and • Wire transfer instructions. <p>When you are <i>no longer</i> our customer, we continue to share your information as described in this notice.</p>
--------------	---

How?	All financial companies need to share customers' personal information to run their everyday business. In the section below, we list the reasons financial companies can share their customers' personal information; the reasons the Absolute Strategies Fund chooses to share; and whether you can limit this sharing.
-------------	---

Reasons we can share your personal information	Does the Absolute Strategies Fund share?	Can you limit this sharing?
For our everyday business purposes— such as to process your transactions, maintain your account(s), respond to court orders and legal investigations, or report to credit bureaus	Yes	No
For our marketing purposes— to offer our products and services to you	No	We do not share
For joint marketing with other financial companies	No	We do not share
For our affiliates' everyday business purposes— information about your transactions and experiences	No	We do not share
For our affiliates' everyday business purposes— information about your credit worthiness	No	We do not share
For non-affiliates to market to you	No	We do not share

Questions?	Call toll-free: (888) 992-2765.
-------------------	---------------------------------

Who we are**Who is providing this notice?**

Absolute Strategies Fund

What we do**How does the Absolute Strategies Fund protect my personal information?**

To protect your personal information from unauthorized access and use, we use security measures that comply with federal law. These measures include computer safeguards and secured files and buildings.

How does the Absolute Strategies Fund collect my personal information?

We collect your personal information, for example, when you

- open an account or
- provide account information or
- make deposits or withdrawals from your account or
- make a wire transfer or
- tell us where to send the money.

We also collect your personal information from other companies.

Why can't I limit all sharing?

Federal law gives you the right to limit only

- sharing for affiliates' everyday business purposes—information about your creditworthiness
- affiliates from using your information to market to you
- sharing for non-affiliates to market to you

State laws and individual companies may give you additional rights to limit sharing.

Definitions**Affiliates**

Companies related by common ownership or control. They can be financial and nonfinancial companies.

Absolute Investment Advisers LLC, the investment adviser to the Absolute Strategies Fund, could be deemed to be an affiliate.

Non-affiliates

Companies not related by common ownership or control. They can be financial and nonfinancial companies.

The Absolute Strategies Fund does not share with non-affiliates so they can market to you.

Joint marketing

A formal agreement between non-affiliated financial companies that together market financial products or services to you.

The Absolute Strategies Fund doesn't jointly market.
